Maize Value Chain Analysis In Ethiopia Thesisr:

Digital finance and agri-food value chains: Case studies from Ethiopia Wassie, Solomon, 2025-07-09 Agriculture is of paramount importance to Ethiopia's economy. Agriculture accounts for 40 percent of the country's GDP, 80 percent of export earnings, and employs 75 percent of the population (Tamene Barrett et al. 2022). *Report on off-farm post-harvest loss assessment survey in Ethiopia* Food and Agriculture Organization of the United Nations, 2023-01-21. A study on post-harvest losses was conducted in Amhara, Oromiya, and the Southern Nations, Nationalities, and Peoples' Regions of Ethiopia to pilot a methodology to produce national statistics of off-farm losses. The study was conducted by the Ethiopian Statistics Service (ESS) with technical and financial support from the Office of the Chief Statistician and the Statistics Division of the Food and Agriculture Organization of the United Nations (FAO).

Strategic analysis and intervention plan for fresh and industrial tomato in the Agro-Commodities Procurement Zone of the pilot Integrated Agro-Industrial Park in Central-Eastern Oromia, Ethiopia Food and Agriculture Organization of the United Nations, 2019-09-04. With the current Second Growth and Transformation Plan (2015-2020), the Government of Ethiopia expects the agro-industrial sector to play a key role in economic growth of the country. Accordingly, the creation of Integrated Agro-Industrial Parks has been identified as one of the key mechanisms for accelerating the development of the sector and the structural transformation of agriculture. Agro-industrial parks will play a significant role in transitioning Ethiopia from an agricultural-led into an industrial-led economy. In view of that, the development of Integrated Agro-Industrial Parks has been prioritized in Ethiopia's national development strategy, and four Agro-Industrial Growth Corridors have been selected for piloting the establishment of four Integrated Agro-Industrial Parks. The initiative aims at driving the structural transformation of the Ethiopian economy while reducing rural poverty and creating a better environment for increased investments in agro-processing and allied sectors. Since 1981, FAO has been a strong partner of the Government of Ethiopia towards the achievement of national food security and economic growth goals. FAO is working closely with the Ministry of Agriculture and Natural Resources to empower value chain actors and to promote inclusive, efficient, and sustainable agricultural value chains. The present document is the fourth one of a series of detailed analyses of prioritized commodities which will lead to inclusive, sustainable, and stronger agricultural value chains in the Agro-Commodities Procurement Zone of the pilot Integrated Agro-Industrial Park in Central-Eastern Oromia.

Energy saving and eco-friendly building approaches have become an important part of modern development which places special emphasis on

resource optimisation Planning has a key role to play in ensuring that these solutions as well as new materials and processes are incorporated in the most efficient manner Problems related to development and planning which affect rural and urban areas are present in all regions of the world Accelerated urbanisation has resulted in deterioration of the environment and loss of quality of life Urban development can also aggravate problems faced by rural areas such as forests mountain regions and coastal areas amongst many others Taking into consideration the interaction between different regions and developing new methodologies for monitoring planning and implementation of novel strategies can offer solutions for mitigating environmental pollution and non sustainable use of available resources

Transformative Food Value Chains for Local Development Silke Maria Stöber,Wolfgang Bokelmann,Walter Odongo,Susanne Huyskens-Keil,Joanita Kataike,2024-01-26

Understanding the capacity of food systems to undertake a transformation towards sustainability requires understanding how resources stream in and out of the systems As complex socio economic structures food and agricultural value chains are important means for channeling resources knowledge and agency in and out of rural areas Given their prominent role on the development agendas there is mixed evidence as to what extent value chains and their actors can contribute to improving the livelihoods in poor rural and urban areas In order to shape sustainable living places transformative capacities and good governance are important mainstays Transformative agri food value chains are robust and often act as the sole transmission belt for returning capital resources and identity back into vulnerable areas Moreover domestic or regional chains may provide urban consumers with fresh quality food that also contributes to regional identity

Towards Sustainable Development Goal of Zero Hunger: Exploring the Dynamic Relationships between Food Pricing, Agriculture, and Food Security Noshaba Aziz,Wioletta Żukiewicz-Sobczak ,Ruishi Si,2025-10-16 United Nations Sustainable Development Goal SDG 2 aspires to eradicate hunger by 2030 emphasizing the intricate relationships between agriculture food security and nutrition However this noble pursuit faces formidable challenges in emerging countries due to a confluence of international disruptions Climate change the COVID 19 pandemic and geopolitical conflicts like the war in Ukraine have triggered sharp spikes in commodity prices amplifying food security concerns particularly in developing nations The Food and Agriculture Organization of the United Nations recently reported the highest global food price increase since the 1990s in March This commodity price inflation in turn reverberates across agriculture impacting not only a nation s economy but also its food production capacity Elevated commodity prices drive up the costs of agricultural inputs such as fertilizers pesticides and fuel compelling farmers to pass these expenses on to consumers in the form of higher food prices Moreover country specific economic factors within the agricultural sector including land ownership technology adoption farming practices and infrastructure further complicate the food security landscape Therefore the intricate interplay between commodity price inflation agriculture and food security is significantly influenced by a nation s unique economic dynamics within its agricultural sector Effectively addressing these challenges necessitates a blend of international and domestic policy measures to ensure that the benefits of agricultural progress reach the broader population

Enhancing Food Production System Resilience for Food Security Facing a Changing Environment Liming Ye, Ping Zhu, 2023-11-28 As the dominant source of the human food supply the global land system underlies the foundation of the livelihood and wellbeing of humanity on Earth On the one hand the growth rate in the land system's productive capacity of food has played a key role in global food provision Technological breakthroughs in wheat and rice production during the past few decades for instance have greatly contributed to the maintenance of this growth rate in many parts of the world On the other hand however the terrestrial food production system is facing increasing challenges from environmental stressors ranging from climate change air pollution to land degradation Whether and how the global land system will support the food security of more than 10 billion people in the 21st century while minimizing its environmental footprint remains an open question to debate It is inevitable that the global food production system has to be shifted from focusing on production expansion to land system resilience so that the dual goals of sustainable production and environmental friendliness can be simultaneously

achieved *Transforming African Food Systems* Claire Helen Quinn, Andrew John Dougill, Julian Douglas May, 2025-10-24

Overcoming Africa's development challenges cannot be uncoupled from the need to transform the continent's food systems. One in four people in sub-Saharan Africa faces food insecurity and Africa will need to produce 80% more food by 2050. The challenge is complicated by the interrelationship between agriculture and environmental sustainability. In addition, agriculture also remains one of the most effective pathways out of poverty on the continent. As agriculture both contributes to and is affected by climate change, there is a pressing need for innovation in climate-smart agriculture that considers the environment as integral to the food system. However, access to nutritious, safe food and improved livelihoods does not solely depend on boosting agricultural productivity. Food systems encompass the activities and actors involved in all aspects of the food supply chain, from production through to consumption and disposal of food. A food systems research approach recognises the importance of interactions and relationships between activities, actors, and thus the importance of interdisciplinary approaches for achieving transformative change. The concerted and coordinated actions of the food industry, agriculture, production and processing, retail, food service sector, and waste disposal, and consumers are crucial to promote sustainable consumption and production with a focus on reducing all forms of food losses throughout the entire supply chain. Food systems transformation needs to focus not just on increasing production but on access to food and markets, nutrition, diversity, and security, climate resilience, and adaptation of both agro-ecological systems and the food system more broadly. This Research Topic focuses specifically on transformation of African food systems. While comprising many similar activities, actors, to other food systems, African food systems also have activities, actors, and conditions that are specific to the African context. These contextual factors include a shared history of colonisation that creates specific historical, demographic, political, and socio-cultural drivers of change, value chains that are often short and reliant on informal exchange, and small-scale operations, distinct territorial imbalances that create significant inequalities, and normative and cognitive institutions that create diverse cultural beliefs and values while influencing the roles of women and youth in food systems. We welcome submission of original research articles, case studies, systematic reviews, or meta-analysis that offer new insights and perspectives on African food systems transformation. This topic will bring together interdisciplinary research and practice and provide a platform for knowledge exchange, collaboration, and collective action for transforming African food systems so that they are equitable, resilient, and sustainable.

Bulletin of the Atomic Scientists, 1973-10. The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security. Founded by Manhattan Project Scientists, the Bulletin's iconic Doomsday Clock stimulates solutions for a safer world. [Maize Value Chain Analysis](#) Nelson Mango, Lawrence Mapemba, Hardwick Tchale, Clifton Makate, Nothando Dunjana, Mark Lundy. This article analyzes maize value chain performance in Malawi and Mozambique using data collected from a market study commissioned by the International Centre for Tropical Agriculture. The results show that although smallholder maize

productivity is slightly higher in Malawi a maize value chain analysis indicates that smallholder maize in Mozambique is more competitive Mozambique has a relatively higher competitive advantage with regard to maize production because of the relatively lower input costs perhaps due to its proximity to the coast which invariably reduces input costs relative to its land locked neighbor Malawi However smallholder maize productivity is low in both countries when compared to the regional average The article concludes that interventions aimed at raising smallholder productivity would invariably make smallholder farmers more competitive It proposes policy implications aimed at raising the productivity and trade competitiveness of maize as this will ensure the overall productivity of the maize based smallholder farming system in the two countries
