Manifold Origami Mindbender Solutions:

Explorations of Flat Foldable Origami and Solutions to Emergency and Homeless Shelter Problems Thinh Truong, 2017

Origami Dots Andy Parkinson, 2020 This book is a collection of intriguing mathematical challenges that come from folding paper All the challenges are the same fold the corner of the paper to a given dot and find the area that remains uncovered Despite the same question a small move of the target dot can drastically change the logic needed to find the solution to the challenge So the problems become increasingly complex with possible solutions involving Pythagoras and similar triangles as well as trigonometry and algebra Insights learnt from earlier challenges can help with those that follow However if at point the challenge becomes too great the answers can always be found by measurement with a ruler and directly calculating the area The book encourages curiosity a find out what can you discovery approach that creates interesting and varied journeys towards a solution Starting with an approximate guess these journeys are for all ages 10 years and over to explore and discuss To play concretely with paper while thinking and reasoning geometrically Thus for teachers the book provides a rich source of challenges that have a similar appearance yet hide an obvious method and require students to choose how to approach the problem Comparing solution methods when checking the answers is also useful as the solutions highlight some fascinating facts linked with these simple folds
