Jobrack, 2011-12-23 Educational reforms and standards have been a topic of public debate for decades with the latest go round being the State Common Core Curriculum Standards But time and again those reforms have failed and each set of standards no matter how new and different has had little impact on improving student achievement Why The textbooks Textbooks sell based on design and superficial features not because they are based on the latest research on how children learn and how well they promote student achievement In *Tyranny of the Textbook* Beverlee Jobrack retired from educational publishing sheds light on why this happens She gives an engaging and fascinating look behind the scenes of how K 12 textbooks are developed written adopted and sold And perhaps most importantly she clearly spells out how the system can change so that reforms and standards have a shot at finally being effective Did you know Reform efforts have focused on writing and rewriting standards and tests but these rarely have any effect on the core curriculum that is published School districts and states don't use effectiveness as a criterion for evaluating and purchasing textbooks Publishers don't offer textbooks with better content or the latest teaching methods because teachers don't want textbooks that require them to change their practices Teachers report that they don't rely on a textbook in their class but research shows that they do Three companies publish 75 percent of the K 12 educational materials Those three companies are producing similar programs with the same instructional strategies none of which require teachers to change their practices significantly Publishers write

Theories Of Probability: An Examination Of Logical And Qualitative Foundations Louis E

Narens,2007-08-13 Standard probability theory has been an enormously successful contribution to modern science However from many perspectives it is too narrow as a general theory of uncertainty particularly for issues involving subjective uncertainty This first of its kind book is primarily based on qualitative approaches to probabilistic like uncertainty and includes qualitative theories for the standard theory as well as several of its generalizations One of these generalizations produces a belief function composed of two functions a probability function that measures the probabilistic strength of an uncertain event and another function that measures the amount of ambiguity or vagueness of the event Another unique approach of the book is to change the event space from a boolean algebra which is closely linked to classical propositional logic to a different event algebra that is closely linked to a well studied generalization of classical propositional logic known as intuitionistic logic Together these new qualitative theories succeed where the standard probability theory fails by accounting for a number of puzzling empirical findings in the psychology of human probability judgments and decision making
