

Unit Overview

This unit forms the core of the study of macroeconomics. The students must be able to use the models and the methods of analysis presented here.

The simple Keynesian model is presented as the transition from national income accounting to modeling the economy. This model also provides a clear mechanism for discussing the consumption function and the multiplier process. The Keynesian model holds the price level constant, which is not a realistic representation of the economy. The aggregate demand and aggregate supply model, where the price level and output are determined, is the central model for macroeconomic analysis. The students will have to use this model throughout the Advanced Placement Examination. They will have to interpret it; they will have to use the model to analyze problems. Most importantly, the students will have to present answers to questions by providing the graphical analysis of the aggregate demand and aggregate supply model. Initially, the short-run version of this model is presented. The analysis to transition the economy from the short run to the long run is presented later in the unit. The unit concludes with analysis of fiscal policy. Unit 3, in combination with Unit 4 on the monetary sector, provides the students with the essential macroeconomic model and policy analysis mechanisms.

The students may feel overwhelmed by the amount of material in this unit. It is essential that you spend sufficient time on Units 3 and 4 for the students to be able to analyze monetary and fiscal policy in the short run and the long run, and to understand the fundamental workings of the economy. The material presented here may be presented in a different order in the textbook you are using. Therefore, you may have to rearrange the order in which you use the activities. The material in this unit includes several of the content areas in the course outline presented by the College Board's Advanced Placement material.
