Innovations in Collaborative Modeling Laura Schmitt-Olabisi,Miles McNall,William Porter,Jinhua Zhao,2020-05-01 Collaborative applications of a variety of modeling methodologies have multiplied in recent decades due to widespread recognition of the power of models to integrate information from multiple sources test assumptions about policy and management choices and forecast the future states of complex systems However information about these modeling

efforts often is segregated by both discipline and modeling approach preventing modelers from learning from one another This volume addresses the need for cross disciplinary and cross methodological communication about collaborative modeling To enhance a shared understanding of systems problems scientists and stakeholders need strategies for integrating information from their respective fields dealing with issues of scale and focus and rigorously investigating assumptions The chapters in this volume first explore modeling methodologies for enhanced collaboration then offer case studies of collaborative modeling across different complex systems problems The volume will be useful for experienced and beginning modelers as well as scientists and stakeholders who work with modelers
