Systems Feedbacks and Coevolution Innovative Sensing Observing Measuring and Analysing Human Water Data Pluralistic water research integrates the hydrological and the social to provide sustainable solutions to water crises While relying upon robust quantitative modelling sociohydrology captures crises across many waters surface ground and interstitial along quantity and quality dimensions hydrosocial unfurls power hierarchies in access to safe and required quota of water be it for drinking or irrigation purposes The success of engineering solutions laying out hard interventions such as solar powered irrigation dams high yielding crop varieties water treatment plants and water distributions and purifications depend on soft socio political cultural and psychological variables like the political landscape community behaviours and governance arrangements How these soft parameters limit or advance the effect of hard interventions await more enhanced modelling and place based qualitative analyses to disentangle various cause effect pathways While historical and process based sociohydrology accommodates detailed temporal datasets and causal relationships across human water systems the hydrosocial paradigm reconciles non modern anti hegemonic water techniques and knowledge systems animating local agencies within specific hydrosapes This issue is dedicated to capture real time innovations through which water challenges have been confronted It intends to unravel storylines along actionable water projects reflecting on mediations across multiple actors and networks in specific spatio temporal and cultural contexts finally drawing our attention to the correlation between projected promises and actual realities Situated at the crossroads of boundary work we invite articles that will deploy a range of interdisciplinary frameworks like RANAS Risk Attitude Norms Ability and Self regulation APIE Awareness Participation Involvement and Engagement HUPE Historical Urban Political Ecology etc to demonstrate coupled sociohydrological and hydrosocial realities and in turn getting informed by empirical insights emanating from these actual water interventions The final aim of the special issue is not to showcase water just actual interventions but to elicit a rigorous mapping of sustainable processes facilitating collective co production of resilient water trajectories **The Mathematics Education**, 2004

Rudiments of Mathematics Part 1 , *Sociocultural Research on Mathematics Education* Bill Atweh, Helen Forgasz, Ben Nebres, 2013-03-07 This volume the first to bring together research on sociocultural aspects of mathematics education presents contemporary and international perspectives on social justice and equity issues that impact mathematics education In particular it highlights the importance of three interacting and powerful factors gender social and cultural dimensions Sociocultural Research on Mathematics Education An International Perspective is distinguished in several ways It is research based Chapters report on significant research projects present a comprehensive and critical summary of the research findings and offer a critical discussion of research methods and theoretical perspectives undertaken in the area It is future oriented presenting recommendations for practice and policy and identifying areas for further research It deals with all aspects of formal and informal mathematics education and applications and all levels of formal schooling As the context of mathematics education rapidly changes with an increased demand for mathematically literate citizenship an increased

awareness of issues of equity inclusivity and accountability and increased efforts for globalization of curriculum development and research questions are being raised more than ever before about the problems of teaching and learning mathematics from a non cognitive science perspective This book contributes significantly to addressing such issues and answering such questions It is especially relevant for researchers graduate students and policymakers in the field of mathematics education

Modeling of Physiological Flows Davide Ambrosi, Alfio Quarteroni, Gianluigi Rozza, 2012-10-31 This book offers a mathematical update of the state of the art of the research in the field of mathematical and numerical models of the circulatory system It is structured into different chapters written by outstanding experts in the field Many fundamental issues are considered such as the mathematical representation of vascular geometries extracted from medical images modelling blood rheology and the complex multilayer structure of the vascular tissue and its possible pathologies the mechanical and chemical interaction between blood and vascular walls and the different scales coupling local and systemic dynamics All of these topics introduce challenging mathematical and numerical problems demanding for advanced analysis and efficient simulation techniques and pay constant attention to applications of relevant clinical interest This book is addressed to graduate students and researchers in the field of bioengineering applied mathematics and medicine wishing to engage themselves in the fascinating task of modeling the cardiovascular system or more broadly physiological flows **Recent**

Mathematical Geoenergy Paul Pukite,Dennis Coyne,Daniel Challou,2019-01-07 A rigorous mathematical problem solving framework for analyzing the Earth s energy resources GeoEnergy encompasses the range of energy technologies and sources that interact with the geological subsurface Fossil fuel availability studies have historically lacked concise modeling tending instead toward heuristics and overly complex processes Mathematical GeoEnergy Oil Discovery Depletion and Renewal details leading edge research based on a mathematically oriented approach to geoenergy analysis Volume highlights include Applies a formal mathematical framework to oil discovery depletion and analysis Employs first order applied physics modeling decreasing computational resource requirements Illustrates model interpolation and extrapolation to fill out missing or indeterminate data Covers both stochastic and deterministic mathematical processes for historical analysis and prediction Emphasizes the importance of up to date data accessed through the companion website Demonstrates the advantages of mathematical modeling over conventional heuristic and empirical approaches Accurately analyzes the past and predicts the future of geoenergy depletion and renewal using models derived from observed production data Intuitive mathematical models and readily available algorithms make Mathematical GeoEnergy Oil Discovery Depletion and Renewal an insightful and invaluable resource for scientists and engineers using robust statistical and analytical tools applicable to oil discovery reservoir sizing dispersion production models reserve growth and more **Decision Processes by Using**

Bivariate Normal Quantile Pairs N. C. Das,2015-10-07 This book discusses equi quantile values and their use in generating decision alternatives under the twofold complexities of uncertainty and dependence offering scope for surrogating between two alternative portfolios when they are correlated The book begins with a discussion on components of rationality and learning models as indispensable concepts in decision making processes It identifies three fold complexities in such processes uncertainty dependence and dynamism The book is a novel attempt to seek tangible solutions for such decision problems To do so four hundred tables of bi quantile pairs are presented for carefully chosen grids In fact it is a two variable generalization of the inverse normal integral table which is used in obtaining bivariate normal quantile pairs for the given values of probability and correlation When making decisions only two of them have to be taken at a time These tables are essential tools for decision making under risk and dependence and offer scope for delving up to a single step of dynamism The book subsequently addresses averments dealing with applications and advantages The content is useful to empirical scientists and risk oriented decision makers who are often required to make choices on the basis of pairs of

variables The book also helps simulators seeking valid confidence intervals for their estimates and particle physicists looking for condensed confidence intervals for Higgs Boson utilizing the Bose Einstein correlation given the magnitude of such correlations Entrepreneurs and investors as well as students of management statistics economics and econometrics psychology psychometrics and psychographics social sciences geographic information system geology agricultural and veterinary sciences medical sciences and diagnostics and remote sensing will also find the book very useful Catalog of Copyright Entries.
