Agricultural Engineering in Development: Concepts and principles R. C. Gifford,1992-01-01      Safe Design and Construction of Machinery Elizabeth Bluff,2017-03-02 The origin of this book is the compelling evidence that a high proportion of machinery related deaths and injuries are attributable to genuine and serious risks originating within machine design and construction This trend continues despite significant legal obligations notably the European regulatory regime giving effect to the Machinery Directive among others and a substantial body of specialist knowledge originating in the disciplines of human factors and safety engineering Grounded in empirical research with machinery manufacturers this book aims to elucidate the factors and processes shaping firms performance for machinery safety and considers their compatibility with legal obligations Through a unique blending of rich empirical data coupled with safety human factors socio legal and learning scholarship the book provides both a nuanced account of firms performance for machinery safety and makes conceptual and theoretical contributions to understanding and explaining their performance Specifically the book elucidates the role of knowledge and motivational factors and how these are constituted in shaping firms performance It reveals the multiple state and non state influences that create plural responses among manufacturing firms which typically operate in supply chains and networks and often globally These insights provide the foundations to enhance regulatory design and the book s conclusion recommends some innovative directions for regulatory interventions to sustain the safe design and construction of machinery      **Handbook of Farm, Dairy and Food Machinery Engineering** Myer Kutz,2019-06-15 Handbook of Agricultural and Farm Machinery Third Edition is the essential reference for understanding the food industry from farm machinery to dairy processing food storage facilities and the machinery that processes and packages foods Effective and efficient food delivery systems are built around processes that maximize efforts while minimizing cost and time This comprehensive reference is for engineers who design and build machinery and processing equipment shipping containers and packaging and storage equipment It includes coverage of microwave vacuum applications in grain processing cacao processing fruit and vegetable processing ohmic heating of meat facility design closures for glass containers double seaming and more The book s chapters include an excellent overview of food engineering but also regulation and safety information machinery design for the various stages of food production from tillage to processing and packaging Each chapter includes the state of the art in technology for each subject and numerous illustrations tables and references to guide the reader through key concepts Describes the latest breakthroughs in food production machinery Features new chapters on engineering properties of food materials UAS applications and microwave processing of foods Provides efficient access to fundamental information and presents real world applications Includes design of machinery and facilities as well as theoretical bases for determining and predicting behavior of foods as they are handled and processed      **Design in Agricultural Engineering** L.
