students and also practising engineers who want a comprehensive guide to the design of prestressed concrete structures. It retains the clear and concise explanations and the easy to read style of the first edition but the content has been extensively reorganised and considerably expanded and updated. New chapters cover design procedures, actions and loads, prestressing systems and construction requirements and connections and detailing. The topic of serviceability is developed extensively throughout. The authors have been researching and teaching the behaviour and design of prestressed concrete structures for more than 35 years and this updated edition of the book reflects this wealth of experience. The work has also gained much from Ian Gilbert's active and long time involvement in the development of the Australian Standards for Concrete Structures AS3600 2009 and Concrete Bridges AS5100.5 2012.

Rehabilitation of Concrete Structures with Fiber-Reinforced Polymer Riadh Al-Mahaidi, Robin Kalfat, 2018-11-12. Rehabilitation of Concrete Structures with Fiber Reinforced Polymer is a complete guide to the use of FRP in flexural shear and axial strengthening of concrete structures. Through worked design examples, the authors guide readers through the details of usage, including anchorage systems, different materials and methods of repairing concrete structures using these techniques. Topics include the usage of FRP in concrete structure repair, concrete structural deterioration and rehabilitation, methods of structural rehabilitation and strengthening, a review of the design basis for FRP systems, including strengthening limits, fire endurance and environmental considerations. In addition, readers will find sections on the strengthening of members under flexural stress, including failure modes, design procedures, examples and anchorage detailing, and sections on shear and torsion stress, axial strengthening, the installation of FRP systems and strengthening against extreme loads such as earthquakes and fire, amongst other important topics. Presents worked design examples covering flexural shear and axial strengthening. Includes complete coverage of FRP in Concrete Repair. Explores the most recent guidelines ACI440.2R-07, AS5100.8-2017 and Concrete Society technical report no 55 2012.

Design of Prestressed Concrete to Eurocode 2 Raymond Ian Gilbert, Neil Colin Mickleborough, Gianluca Ranzi, 2017-01-27. The design of structures in general and prestressed concrete structures in particular requires considerably more information than is contained in building codes. A sound understanding of structural behaviour at all stages of loading is essential. This textbook presents a detailed description and explanation of the behaviour of prestressed concrete members and structures both at service loads and at ultimate loads and in doing so provides a comprehensive and up to date guide to structural design. Much of the text is based on first principles and relies only on the principles of mechanics and the properties of concrete and steel, with numerous worked examples. However, where the design requirements are code specific, this book refers to the provisions of Eurocode 2 Design of Concrete Structures and where possible the notation is the same as in Eurocode 2. A parallel volume is written to the Australian Standard for Concrete Structures AS3600 2009. The text runs from an introduction to the

fundamentals to in depth treatments of more advanced topics in modern prestressed concrete structures It suits senior undergraduate and graduate students and also practising engineers who want comprehensive introduction to the design of prestressed concrete structures It retains the clear and concise explanations and the easy to read style of the first edition but the content has been extensively re organised and considerably expanded and updated New chapters cover design procedures actions and loads prestressing systems and construction requirements connections and detailing and design concepts for prestressed concrete bridges The topic of serviceability is developed extensively throughout All the authors have been researching and teaching the behaviour and design of prestressed concrete structures for over thirty five years and the proposed new edition of the book reflects this wealth of experience The work has also gained much from Professor Gilbert active and long time involvement in the development of standards for concrete buildings and concrete bridges
