Direct Dyes And Their Application Infohouse:

Dyes and Their Application to Textile Fabrics Archibald John Hall, 1923 *Handbook of Textile and Industrial Dyeing* M Clark, 2011-10-25 Dyeing is one of the most effective and popular methods used for colouring textiles and other materials Dyes are employed in a variety of industries from cosmetic production to the medical sector The two volumes of the Handbook of textile and industrial dyeing provide a detailed review of the latest techniques and equipment used in the dyeing industry as well as examining dyes and their application in a number of different industrial sectors Volume 1 deals with the principles of dyeing and techniques used in the dyeing process and looks at the different types of dyes currently available Part one begins with a general introduction to dyeing which is followed by chapters that examine various aspects of the dyeing process from the pre treatment of textiles to the machinery employed Chapters in part two then review the main types of dyes used today including disperse dyes acid dyes fluorescent dyes and many others for a diverse range of applications With its distinguished editor and contributions from some of the world's leading authorities the Handbook of textile and industrial dyeing is an essential reference for designers colour technologists and product developers working in a variety of sectors and will also be suitable for academic use Examines dyeing and its application in a number of different industrial sectors Deals with the principles of dyeing and techniques used in the dyeing process as well as types of dyes currently available Chapters review various dye types right through to modelling and predicting dye properties and the chemistry of dyeing Direct Dyestuffs George Dominguez, 1970 **The Chemistry and Application of Dyes** David R. Waring, Geoffrey Hallas, 2013-11-11 It is particularly appropriate that a volume concerned with dye chemistry should be included in the series Topics in Applied Chemistry The development of the dye industry has been inexorably linked not only with the development of the chemical industry but also with organic chemistry itself since the middle of the last century The position of dye chemistry at the forefront of chemical 1945 and more markedly so during the last advance has declined somewhat since 15 years with pharmaceutical and medicinal chemistry assuming an increasingly prominent position Nevertheless dye production still accounts for a significant portion of the business of most major chemical companies The field of dye chemistry has stimulated the publication of many books over the years but surprisingly few have concentrated on or even included the practical aspects of dye synthesis and application Thus the present volume is designed to fulfill that need and provide the reader with an account of advances in dye chemistry concentrating on more recent work and giving in a single volume synthetic detail and methods of application of the most important classes information which will be invaluable to both student and research chemist alike **Direct Dye Application with Resist as a Surface Decoration of Textiles** Judy L.
