Hydropower in the New Millennium B. Honningsvag, G.H. Midttomme, K. Repp, K. Vaskinn, T. Westernen, 2020-12-18 The power sector has undergone a liberalization process both in industrialized and developing countries involving market regimes as well as ownership structure These processes have called for new and innovative concepts affecting both the operation of existing hydropower plants and transmission facilities as well as the development and implementation of new projects At the same time a sharper focus is being placed on environmental considerations In this context it is important to emphasize the obvious benefits of hydropower as a clean renewable and sustainable energy source It is however also relevant to focus on the impact on the local environment during the planning and operation of hydropower plants New knowledge and methods have been developed that make it possible to mitigate the local undesirable effects of such projects Development and operation of modern power systems require sophisticated technology Continuous research and development in this field is therefore crucial to maintaining hydropower as a competitive and environmentally well accepted form of power generation

Selected Water Resources Abstracts ,1991 *Channels and Channel Control Structures* K. V. H. Smith, 2013-11-21 The development of water resources has proceeded at an amazing speed around the world in the last few decades The hydraulic engineer has played his part in constructing much larger artificial channels than ever before larger and more sophisticated control structures and systems of irrigation drainage and water supply channels in which the flow by its nature is complex and unsteady requiring computer based techniques at both the design and operation stage It seemed appropriate to look briefly at some of the developments in hydraulic design resulting from this situation Hence the idea of the Conference was formed The Proceedings of the Conference show that hydraulic engineers have been able to acquire a very substantial base of design capability from the experience of the period referred to The most outstanding development to have occurred is in the combination of physical and mathematical modelling which in hydraulic engineering has followed a parallel path to that in other branches of engineering science The Proceedings of this Conference will give to the reader an awareness of the current state of hydraulic design in open channel flow and open channel control structures K V H Smith Editor 1 CONTROL AND DIVERSION STRUCTURES 1 3 FACTORS AFFECTING BRINK DEPTH IN RECTANGULAR OVERFALLS G C Christodoulou G C Noutsopoulos and S A Andreou Dept of Civil Engineering National Technical Univ of Athens Greece
