After Plastic Waste Du Cheng, 2021 In order to limit plastic waste to a controllable range I try to reduce the cost of recycled plastics and increase the value of recycled plastics After research and experimentation I created a method of turning plastic bottles into plastic cloth through cutting and knitting This method and material provide a new direction for the reuse of plastics For the creation of new reuse methods it is not only necessary to look to the future but also to see the past I found inspiration from human industrial history to deal with plastic pollution This project aims to make people aware of the value of recycled plastics abstract **Design of Plastic Recycling Equipment** Miguel Anton M. Designing plastics circulation: Anne Raudaskoski, Torben Lenau, Tapani Jokinen, Anna Velander Gisslén, Anna-Luise

Metze,2019-08-05 Presently most electrical electronic equipment EEE is not designed for recycling let alone for circulation
Plastics in these products account for 20% of material use and through better design significant environmental and financial
savings could be gained Technological solutions and circular design opportunities already exist but they haven t been
implemented yet Some challenges such as ease of disassembly could be resolved through better communication and by
sharing learnings across the value chain Instead of WEEE we should focus on developing CEEE Circular Electrical and
Electronic Equipment The case examples of this report show how different stages of the lifecycle can be designed so that
plastics circulation becomes possible and makes business sense It is time to take a leap in material flow management and
scale up these circular solutions across the industry
