Designing For The Disabled:

Designing for the Disabled: The New Paradigm Selwyn Goldsmith, 2012-09-10 Selwyn Goldsmith's *Designing for the Disabled* has since it was first published in 1963 been a bible for practising architects around the world. Now as a new book with a radical new vision comes his *Designing for the Disabled: The New Paradigm*, Goldsmith's new paradigm is based on the concept of architectural disability. As a version of the social model of disability, it is not exclusively the property of physically disabled people. Others who are afflicted by it include women, since men customarily get proportionately four times as many amenities in public toilets as women, and women have to queue where men do not, and those with infants in pushchairs, because normal WC facilities are invariably too small to get a pushchair and infant into. To counter architectural disability, Goldsmith's line is that the axiom for legislation, action has to be access for everyone; it should not just be access for the disabled as it presently is with the Part M building regulation and relevant provisions of the 1995 Disability Discrimination Act. In a 40 page annex to his book, he sets out the terms that a new style Part M regulation and its Approved Document might take, one that would cover alterations to existing buildings as well as new buildings. But architects and building control officers need not, he says, wait for new legislation to apply new practical procedures to meet the requirements of the current Part M regulation; they can, as he advises, act positively now. This is a book which will oblige architects to rethink the methodology of designing for the disabled. It is a book that no practising architect, building control officer, local planning officer, or access officer can afford to be without.

Designing for the Disabled, 2011 **Designing for the Disabled** Selwyn Goldsmith, 1981 **Designing Disability** Elizabeth Guffey, 2017-12-28 *Designing Disability* traces the emergence of an idea and an ideal physical access for the disabled through the evolution of the iconic International Symbol of Access (ISA). The book draws on design history, material culture, and recent critical disability studies to examine not only the development of a design icon but also the cultural history surrounding it. Infirmary and illness may be seen as part of human experience, but disability is a social construct, a way of thinking about and responding to a natural human condition. Elizabeth Guffey's highly original and wide-ranging study considers the period both before and after the introduction of the ISA, tracing the design history of the wheelchair, a product which revolutionised the mobility needs of many disabled people from the 1930s onwards. She also examines the rise of barrier-free architecture in the reception of the ISA and explores how the symbol became widely adopted and even a mark of identity for some, especially within the Disability Rights Movement. Yet despite the social progress which is inextricably linked to the ISA, a growing debate has unfurled around the symbol and its meanings. The most vigorous critiques today have involved guerrilla art, graffiti, and studio practice reflecting new challenges to the relationship between design and disability in the twenty-first century.

Making Disability Modern Bess Williamson, Elizabeth Guffey, 2020-07-23 Making Disability Modern Design Histories brings together leading scholars from a range of disciplinary and national perspectives to examine how designed objects and spaces contributes to the meanings of ability and disability from the late 18th century to the present day and in homes offices and schools to realms of national and international politics The contributors reveal the social role of objects particularly those designed for use by people with disabilities such as walking sticks wheelchairs and prosthetic limbs and consider the active role that makers users and designers take to reshape the material environment into a usable world But it also aims to make clear that definitions of disability and ability are often shaped by design Designing for the Disabled. Disability Differently Jos Boys, 2014-05-23 This ground breaking book aims to take a new and innovative view on how
 disability and architecture might be connected Rather than putting disability at the end of the design process centred mainly
 on compliance it sees disability and ability as creative starting points for the whole design process It asks the intriguing
 question can working from disability actually generate an alternative kind of architectural avant garde To do this *Doing*
Disability Differently explores how thinking about disability opens up to critical and creative investigation our everyday
 social attitudes and practices about people objects and space argues that design can help resist and transform underlying
 and unnoticed inequalities introduces architects to the emerging and important field of disability studies and considers what
 different kinds of design thinking and doing this can enable asks how designing for everyday life in all its diversity can be
 better embedded within contemporary architecture as a discipline offers examples of what doing disability differently can
 mean for architectural theory education and professional practice aims to embed into architectural practice attitudes and
 approaches that creatively and constructively refuse to perpetuate body norms or the resulting inequalities in access to and
 support from built space Ultimately this book suggests that re addressing architecture and disability involves nothing less
 than re thinking how to design for the everyday occupation of space more generally Designing Disability Elizabeth E.
 Guffey, 2018 **Disability, Space, Architecture: A Reader** Jos Boys, 2017-02-17 *Disability Space Architecture A Reader*
 takes a groundbreaking approach to exploring the interconnections between disability architecture and cities The
 contributions come from architecture geography anthropology health studies English language and literature rhetoric and
 composition art history disability studies and disability arts and cover personal theoretical and innovative ideas and work

Richer approaches to disability beyond regulation and design guidance remain fragmented and difficult to find for architectural and built environment students educators and professionals By bringing together in one place some seminal texts and projects as well as newly commissioned writings readers can engage with disability in unexpected and exciting ways that can vibrantly inform their understandings of architecture and urban design Most crucially Disability Space Architecture A Reader opens up not just disability but also ability dis ability as a means of refusing the normalisation of only particular kinds of bodies in the design of built space It reveals how our everyday social attitudes and practices about people objects and spaces can be better understood through the lens of disability and it suggests how thinking differently about disability can enable innovative and new kinds of critical and creative architectural and urban design education and practice
