Wave Propagation in Materials for Modern Applications Andrey Petrin,2010-01-01 In the recent decades there has been a growing interest in micro and nanotechnology The advances in nanotechnology give rise to new applications and new types of materials with unique electromagnetic and mechanical properties This book is devoted to the modern methods in electrodynamics and acoustics which have been developed to describe wave propagation in these

modern materials and nanodevices The book consists of original works of leading scientists in the field of wave propagation who produced new theoretical and experimental methods in the research field and obtained new and important results The first part of the book consists of chapters with general mathematical methods and approaches to the problem of wave propagation A special attention is attracted to the advanced numerical methods fruitfully applied in the field of wave propagation The second part of the book is devoted to the problems of wave propagation in newly developed metamaterials micro and nanostructures and porous media In this part the interested reader will find important and fundamental results on electromagnetic wave propagation in media with negative refraction index and electromagnetic imaging in devices based on the materials The third part of the book is devoted to the problems of wave propagation in elastic and piezoelectric media In the fourth part the works on the problems of wave propagation in plasma are collected The fifth sixth and seventh parts are devoted to the problems of wave propagation in media with chemical reactions in nonlinear and disperse media respectively And finally in the eighth part of the book some experimental methods in wave propagations are considered It is necessary to emphasize that this book is not a textbook It is important that the results combined in it are taken from the desks of researchers Therefore I am sure that in this book the interested and actively working readers scientists engineers and students will find many interesting results and new ideas

Mechanical Vibration: Where Do We Stand? Isaac Elishakoff, 2007-12-12 There is always a delightful sense of movement vibration and life Theodore Robinson 1852 1896 have never solved a major mechanical or interpretive problem at the keyboard I have always solved it in my mind Jorge Bolet 1914 1990 The idea of this book stems from the realization that scientists not unlike laymen should occasionally interrupt their regular work and reflect on the past to see both the accomplishments and the drawbacks so as to be able to plan for future research in the proper perspective But an inquisitive reader may ask Can one really document in any field let alone mechanical vibrations whose very name signifies change where do we stand Did not a Greek philosopher famously claim that one cannot enter a river twice Another on an even more sophisticated note added that actually it is impossible to enter a river even once For in the process of entering both entrant and river change Likewise one can argue that it is nearly impossible to answer the question posed in the title of this volume But experience shows despite the sage observations of the philosophers that one does enter a river lake sea or ocean Likewise scientists do stop if not for a minute for a conference to reflect on the past and if not in its detail then at least in big strokes on various topics presented by the participants questions by the listeners often change the research direction of the presenter
