Digital Mobile Communications And The Tetra System:

Digital Mobile Communications and the TETRA System John Dunlop, Demessie Girma, James Irvine, 2013-08-15 TETRA is a system for mobile wireless communications and this is a highly topical and comprehensive introduction to the design and applications of TETRA systems including practical examples. TETRA is comparable in structure to the world wide successful GSM system however individual features of TETRA are different often more efficient and better designed than in GSM. TETRA is therefore providing an important source for the further development of standards for mobile telecommunications. This volume is timely and one of the first to cover TETRA and related subject areas. Features include Detailed discussion of public and private mobile communications domain Architecture components and services of TETRA and Design and operational aspects of the system. Based on courses for industry presented by the authors *Digital Mobile Communications and the TETRA System* will prove indispensable reading for service providers design engineers and systems managers in the private mobile communications market. It also provides a thorough grounding in general digital mobile communications for communications engineers and undergraduate and postgraduate students in telecommunications.
