Digital Image Processing and Analysis CHANDA, BHABATOSH, MAJUMDER, DWIJESH DUTTA, 2011-10-30 The second edition of this extensively revised and updated text is a result of the positive feedback and constructive suggestions received from academics and students alike. It discusses the fundamentals as well as the advances in digital image processing and analysis both theory and practice to fulfil the needs of students pursuing courses in Computer Science and Engineering CSE and Electronics and Communication Engineering ECE both at undergraduate and postgraduate levels. It is also considered useful for teachers, professional engineers and researchers. The second edition has three objectives: First, each and every chapter has been modified in the light of recent advances as well as emerging concepts. Second, a good deal of colour image processing has been incorporated. A large number of line drawings and images have been included to make the book student friendly. Third, some new problems have been added in almost all chapters to test the student's understanding of the real life problems. The other distinguishing features of the book are: A summary at the end of the chapter to help the student capture the key points. About 320 line drawings and 280 photographs for easy assimilation of the concepts. Chapter end problems for extensive practice and research.

Fundamentals of Digital Image Processing S. Annadurai, 2007

Remote Sensing Digital Image Analysis John A. Richards, 2022-01-06 Remote Sensing Digital Image Analysis provides a comprehensive treatment of the methods used for the processing and interpretation of remotely sensed image data. Over the past decade there have been continuing and significant developments in the algorithms used for the analysis of remote sensing imagery even though many of the fundamentals have substantially remained the same. As with its predecessors this new edition again presents material that has retained value but also includes newer techniques covered from the perspective of operational remote sensing. The book is designed as a teaching text for the senior undergraduate and postgraduate student and as a fundamental treatment for those engaged in research using digital image analysis in remote sensing. The presentation level is for the mathematical non-specialist. Since the very great number of operational users of remote sensing come from the earth sciences communities the text is pitched at a level commensurate with their background. The chapters progress logically through means for the acquisition of remote sensing images, techniques by which they can be corrected and methods for their interpretation. The prime focus is on applications of the methods so that worked examples are included and a set of problems conclude each chapter.
