Electronic Noise and Interfering Signals Gabriel Vasilescu, 2006-01-17. Electronic Noise and Interfering Signals is a comprehensive reference book on noise and interference in electronic circuits with particular focus on low noise design. The first part of the book deals with mechanisms, modelling, and computation of intrinsic noise which is generated in every electronic device. The second part analyzes the coupling mechanisms which can lead to a contamination of circuits by parasitic signals and provides appropriate solutions to this problem. The last part contains more than 100 practical, elaborate case studies. The book requires no advanced mathematical training as it introduces the fundamental methods. Moreover, it provides insight into computational noise analysis with SPICE and NOF, a software developed by the author. The book addresses designers of electronic circuits as well as researchers from electrical engineering, physics, and material science. It should also be of interest for undergraduate and graduate students.

Voice and Speech Quality Perception Ute Jekosch,2005-08-02 Foundations of Voice and Speech Quality

Perception starts out with the fundamental question of How do listeners perceive voice and speech quality and how can these processes be modeled Any quantitative answers require measurements This is natural for physical quantities but harder to imagine for perceptual measurands This book approaches the problem by actually identifying major perceptual dimensions of voice and speech quality perception defining units wherever possible and offering paradigms to position these dimensions into a structural skeleton of perceptual speech and voice quality The emphasis is placed on voice and speech quality assessment of systems in artificial scenarios Many scientific fields are involved This book bridges the gap between two quite diverse fields engineering and humanities and establishes the new research area of Voice and Speech Quality Perception

Practical IP and Telecom for Broadcast Engineering and Operations Fred Huffman,2013-07-18 What you need to know to

survive long term Interests between broadcasters and telecom people are blurring Technical operations and design engineers in one field are increasingly required to deal with practices and techniques in the other The problem is expectations and terminology differences aren t recognized until it s too late Take Quality of Service The telecom people specify a percentage of the time that the service is guaranteed to be available The down time may be very very small But if it occurs during a high priced commercial in the Super Bowl it is very very serious for the broadcaster Practical IP and Telecom for Broadcast Engineering and Operations teaches the technology and how to structure it and make sure the finances work in your favor Learn how to Define communications circuit equipment facilities and services used in broadcast engineering and operations Evaluate suppliers as well as their products and services Prepare technical specifications and requests for bids proposals required in competitive procurement actions Conduct communications operational effectiveness and cost audits Prepare communications cost management strategies and plans Plan and execute capital projects Survive Long Term Critical for engineers technicians and managers engaged in designing installing testing and maintaining equipment and network

services for program content training material or audio video conferencing Valuable knowledge for planning design integration and operation of communications equipment facilities and services used in broadcast operations training and conferencing applications Fred Huffman is a systems engineer with Athens Olympic Broadcasting the Host Broadcaster for the 2004 Games He has more than 35 years experience in technical and management roles in broadcasting and telecommunications fields This work is largely a reflection of that experience captured in a way that introduces the reader to technical aspects of IP ATM and classical telecom along with business essentials such as contracts tariffs project planning budgeting and long range planning

Speech Enhancement Shoji Makino, Jingdong Chen, 2005 We live in a noisy world In all applications telecommunications hands free communications recording human machine interfaces etc that require at least one microphone the signal of interest is usually contaminated by noise and reverberation As a result the microphone signal has to be cleaned with digital signal processing tools before it is played out transmitted or stored This book is about speech enhancement Different well known and state of the art methods for noise reduction with one or multiple microphones are discussed By speech enhancement we mean not only noise reduction but also dereverberation and separation of independent signals These topics are also covered in this book However the general emphasis is on noise reduction because of the large number of applications that can benefit from this technology The goal of this book is to provide a strong reference for researchers engineers and graduate students who are interested in the problem of signal and speech enhancement To do so we invited well known experts to contribute chapters covering the state of the art in this focused field
