ABSTRACT

The goal of this project is to build a four-quadrant DC motor speed control system. The motor has four quadrants of operation: clockwise, counter clockwise, forward brake, and reverse brake. It also features a speed control function. The DC motor's four-quadrant operation is best suited for industries where motors are used based on needs. They can rotate in both clockwise and counter clockwise directions, and brakes can be applied simultaneously in both directions. When performing a certain activity in an industrial plant, the motor must be stopped instantly. In this situation, the proposed system is ideal because it includes both forward and reverse brakes. Instantaneous braking in both directions is performed by briefly applying a reverse voltage across the running motor, and the motor's speed may be controlled using PWM pulses provided by the Arduino Board. This operation is performed using an Arduino Microcontroller Board. The motor is controlled by push buttons that are connected to the Arduino, which receives an input signal and regulates the speed of the motor with a motor driver IC. This project also has a speed control option with a push-button operation.

I. INTRODUCTION

DC machines are extremely important in both industry and everyday life. DC machines have the distinct advantage of having easily adjustable properties. The goal of this study is to use Arduino to create a four-quadrant speed control system for a DC motor. The notion of four quadrant speed control of a dc motor, i.e., clockwise motion, anticlockwise motion, instantaneous forward braking, and immediate reverse braking, has been introduced in this work using Arduino and a motor driver (L293D). The same application is used to control the rudder of an aeroplane, an electric bicycle, or an electric car, among other things. A stationary magnet and revolving coils make up the motor. The brushes provide power to the coil located near the motor magnet pole pieces. The rotor rotates, and the polarity of each coil is reversed, and the motor rotates continuously. The rotational direction. Brush polarity affects the outcome. The torque applied to the rotor is determined by the current going through it through the tangles. The constant speed is determined by the current flowing through the coils as well as the load. The motor is driving the vehicle.

DC Motor Control - A case study MOHAMMED ASLAM HUSAIN, 2018-11-20 In this book the four quadrant speed control system for DC motor has been studied and constructed To achieve speed control an electronic technique called pulse width modulation is used which generates high and low pulses These pulses vary in the speed of the engine For the generation of these pulses a microcontroller is used It is a periodic change in the program Different speed grades and the direction are depended on different buttons The experiment has proved that this system is higher performance Speed control of a machine is the most vital and important part of any industrial organization This paper is designed to develop a four quad speed control system for a DC motor using microcontroller The engine is operated in four quadrants ie clockwise counterclockwise forward brake and reverse brake It also has a feature of speed control The four quadrant operation of the dc engine is best suited for industries where engines are used and as a requirement they can rotate in clockwise counter clockwise and thus apply brakes immediately in both the directions In the case of a specific operation in an industrial environment the engine needs to be stopped immediately In this scenario this system is very integral The PWM pulses generated by the microcontroller are instantaneous in both directions and as a result of applying the PWM pulses The microcontroller used in this project is from 8051 family Push buttons are provided for the operation of the motor which are interfaced to the microcontroller that provides an input signal to it and controls the speed of the engine through a motor driver IC The speed and direction of DC motor has been observed on digital CRO
