Fifty Years of Fuzzy Logic and its Applications Dan E. Tamir, Naphtali D. Rishe, Abraham Kandel, 2015-05-23 This book presents a

comprehensive report on the evolution of Fuzzy Logic since its formulation in Lotfi Zadeh's seminal paper on fuzzy sets published in 1965. In addition, it features a stimulating sampling from the broad field of research and development inspired by Zadeh's paper. The chapters written by pioneers and prominent scholars in the field show how fuzzy sets have been successfully applied to artificial intelligence, control theory, inference, and reasoning. The book also reports on theoretical issues, features recent applications of Fuzzy Logic in the fields of neural networks, clustering, data mining, and software testing, and highlights an important paradigm shift caused by Fuzzy Logic in the area of uncertainty management. Conceived by the editors as an academic celebration of the fifty years anniversary of the 1965 paper, this work is a must-have for students and researchers willing to get an inspiring picture of the potentialities, limitations, achievements, and accomplishments of Fuzzy Logic-based systems.

Type-2 Fuzzy Logic and Systems Robert John, Hani Hagras, Oscar Castillo, 2018-02-07. This book explores recent perspectives on type 2 fuzzy sets. This book is intended to be a reference for scientists and engineers interested in applying type 2 fuzzy logic for solving problems in pattern recognition, intelligent control, intelligent manufacturing, robotics, and automation. This book can also be used as a reference for graduate courses like the following: soft computing, intelligent pattern recognition, computer vision, applied artificial intelligence, and similar ones. We consider that this book can also be used to get novel ideas for new lines of research or to continue the lines of research proposed by the authors.

Advanced Concepts in Fuzzy Logic and Systems with Membership Uncertainty Janusz T. Starczewski, 2014-09-20. This book generalizes fuzzy logic systems for different types of uncertainty, including semantic ambiguity resulting from limited perception or lack of knowledge about exact membership functions, lack of attributes or granularity arising from discretization of real data, imprecise description of membership functions, vagueness perceived as fuzzification of conditional attributes. Consequently, the membership uncertainty can be modeled by combining methods of conventional and type 2 fuzzy logic, rough set theory, and possibility theory. In particular, this book provides a number of formulae for implementing the operation extended on fuzzy-valued fuzzy sets and presents some basic structures of generalized uncertain fuzzy logic systems, as well as introduces several methods to generate fuzzy membership uncertainty. It is desirable as a reference book for undergraduates in higher education, master and doctor graduates in the courses of computer science, computational intelligence, or fuzzy control and classification, and is

imprecision of the perception based information According to Zadeh it is because of the imprecision of the human imprecision that they do not lend themselves to meaning representation through the use of precise methods based on predicate logic This is the principal reason why existing scientific theories do not have the capability to operate on perception based information We are at the eve of the emergence of a theory with such a capability Its applicative effectiveness has been already demonstrated through the industrial implementation of the soft computing a powerful intelligent technology centred in fuzzy logic At the focus of the papers included in this book is the knowledge and experience of the researchers in relation both to the engineering applications of soft computing and to its social and philosophical implications at the dawn of the third millennium The papers clearly demonstrate that Fuzzy Logic revolutionizes general approaches for solving applied problems and reveals deep connections between them and their solutions

New Applications and Developments of Fuzzy Systems Ibrahim A. Hameed, 2012-03-14 Doctoral Thesis Dissertation from the year 2010 in the subject Computer Sciences Artificial Intelligence grade PhD Korea University Seoul College of Engineering Dept of Industrial Systems and Information Engineering course Intelligence Control and Artificial Intelligence language English abstract Fuzzy Logic FL is a particular area of interest in the study of Artificial intelligence AI based on the idea that in fuzzy sets each element in the set can assume a value from 0 to 1 not just 0 or 1 as in classic or crisp set theory The gradation in the extent to which an element is belonging to the relevant sets is called the degree of membership This degree of membership is a measure of the element's belonging to the set and thus of the precision with which it explains the phenomenon being evaluated A linguistic expression is given to each fuzzy set The information contents of the fuzzy rules are then used to infer the output using a suitable inference engine The key contribution of fuzzy logic in computation of information described in natural language made it applicable to a variety of applications and problem domains from simple control systems to human decision support systems Yet despite its long standing origins it is a relatively new field and as such leaves much room for development The thesis presents two novel applications of fuzzy systems a human decision

support system to help teachers to fairly evaluate students and two hybrid intelligent fuzzy systems a type 2 fuzzy logic system and a combined type 1 fuzzy logic system and extended Kalamn filter for controlling systems operating under high levels of uncertainties due to various sources of measurement and modeling errors The combination of fuzzy logic and the classical student evaluation approach produces easy to understand transparent decision model that can be easily understood by students and teachers alike The developed architecture overcomes the problem of ranking students with the same score It also incorporated different dimensions of evaluation by considering subjective factors such as difficulty complexity and importance of the questions Although we discuss this approach with an example from the area of student evaluation this method evidently has wide applications in other areas of decision making including student s project evaluation learning management systems evaluation as well as other assessment applications
