Handbook of Heuristics Rafael Martí, Panos M. Pardalos, Mauricio G.C. Resende, 2025-11-17 The handbook of heuristics consists of five main parts search strategies local search metaheuristics analysis and implementations and applications They cover from search methods and methodological aspects such as matheuristics the exciting field in which mathematical programming is combined with heuristics to applications that provide the practitioner with a description of some relevant optimization issues in a number of specific application areas such as scheduling vehicle routing or network optimization The first edition of the Handbook of Heuristics was published in 2018 and contained 47 chapters In this second edition the authors revised 30 of them to include new developments in the area that appeared in the last few years In particular the reader may find 14 chapters in search strategies including a new chapter on deep learning 4 in local search 14 in metaheuristics 5 in analysis and implementations and 24 in applications The inclusion of 14 new chapters makes this second edition even more comprehensive totaling 61 chapters

Operations Management Antonella Petrillo, Fabio De Felice, Germano Lambert-Torres, Erik Bonaldi, 2021-03-03 Global competition has caused fundamental changes in the competitive environment of the manufacturing and service industries Firms should develop strategic objectives that upon achievement result in a competitive advantage in the market place The forces of globalization on one hand and rapidly growing marketing opportunities overseas especially in emerging economies on the other have led to the expansion of operations on a global scale The book aims to cover the main topics characterizing operations

management including both strategic issues and practical applications A global environmental business including both manufacturing and services is analyzed The book contains original research and application chapters from different perspectives It is enriched through the analyses of case studies *Optimal Districting and Territory Design* Roger Z. Ríos-Mercado,2020-02-04 This book highlights recent advances in the field of districting territory design and zone design Districting problems deal essentially with tactical decisions and involve mainly dividing a set of geographic units into clusters or territories subject to some planning requirements This book presents models theory algorithms exact or heuristic and applications that would bring research on districting systems up to date and define the state of the art Although papers have addressed real world problems that require districting or territory division decisions this is the first comprehensive book that directly addresses these problems The chapters capture the diverse nature of districting applications as the book is divided into three different areas of research Part I covers recent up to date surveys on important areas of districting such as police districting health care districting and districting algorithms based on computational geometry Part II focuses on recent advances on theory modeling and algorithms including mathematical programming and heuristic approaches and finally Part III contains successful applications in real world districting cases *Handbook of Healthcare Logistics* Maartje E. Zonderland,Richard J. Boucherie,Erwin W. Hans,Nikky Kortbeek,2021-03-29 This book presents healthcare logistics solutions that have been successfully implemented at a variety of healthcare facilities In each case a major challenge is presented along with the solution approach and implementation steps followed by the impact on hospital operations Problems encountered when implementing the results in practice are also discussed Much of the work presented is drawn from the experiences of members of the Center for Healthcare Operations Improvement and Research CHOIR at Twente along with the CHOIR spin off company Rhythm *Enterprise Information Systems* Slimane Hammoudi,Michał Śmiałek,Olivier Camp,Joaquim Filipe,2019-07-27 This book constitutes extended revised and selected papers from the 20th International Conference on Enterprise Information Systems ICEIS 2018 held in Funchal Madeira Portugal in March 2018 The 19 papers presented in this volume were carefully reviewed and selected for inclusion in this book from a total of 242 submissions They deal with topics such as data science and databases ontologies social networks knowledge management software development human computer interaction and multimedia *MEDINFO 2015: eHealth-enabled Health* Andrew Georgiou,Paulo Mazzoncini de Azevedo Marques,2015-09-15 Health and Biomedical Informatics is a rapidly evolving multidisciplinary field one in which new developments may prove crucial in meeting the challenge of providing cost effective patient centered healthcare worldwide This book presents the proceedings of MEDINFO 2015 held in S o Paulo Brazil in August 2015 The theme of this conference is eHealth enabled Health and the broad spectrum of topics covered ranges from emerging methodologies to successful implementations of innovative applications integration and evaluation of eHealth systems and solutions Included here are 178 full papers and 248 poster abstracts selected after a rigorous review process

from nearly 800 submissions by 2 500 authors from 59 countries The conference brings together researchers clinicians technologists and managers from all over the world to share their experiences on the use of information methods systems and technologies to promote patient centered care improving patient safety enhancing care outcomes facilitating translational research and enabling precision medicine as well as advancing education and skills in Health and Biomedical Informatics This comprehensive overview of Health and Biomedical Informatics will be of interest to all those involved in designing commissioning and providing healthcare wherever they may be

Healthcare System Access Nicoleta Serban, 2019-11-21 A guide to a holistic approach to healthcare measurement aimed at improving access and outcomes Healthcare System Access is an important resource that bridges two areas of research access modeling and healthcare system engineering The book's mathematical modeling approach highlights fundamental approaches on measurement of and inference on healthcare access This mathematical modeling facilitates translating data into knowledge in order to make data driven estimates and projections about parameters patterns and trends in the system The complementary engineering approach uses estimates and projections about the system to better inform efforts to design systems that will yield better outcomes The author a noted expert on the topic offers an in depth exploration of the concepts of systematic disparities reviews measures for systematic disparities and presents a statistical framework for making inference on disparities with application to disparities in access The book also includes information health outcomes in the context of prevention and chronic disease management In addition this text Integrates data and knowledge from various fields to provide a framework for decision making in transforming access to healthcare Provides in depth material including illustrations of how to use state of art methodology large data sources and research from various fields Includes end of chapter case studies for applying concepts to real world conditions Written for health systems engineers Healthcare System Access Measurement Inference and Intervention puts the focus on approaches to measure healthcare access and addresses important enablers of such change in healthcare towards improving access and outcomes

Handbook of Healthcare System Scheduling Randolph Hall, 2011-11-25 This edited volume captures and communicates the best thinking on how to improve healthcare by improving the delivery of services providing care when and where it is needed most through application of state of the art scheduling systems Over 12 chapters the authors cover aspects of setting appointments allocating healthcare resources and planning to ensure that capacity matches needs for care A central theme of the book is increasing healthcare efficiency so that both the cost of care is reduced and more patients have access to care This can be accomplished through reduction of idle time lessening the time needed to provide services and matching resources to the needs where they can have the greatest possible impact on health Within their chapters authors address 1 Use of scheduling to improve healthcare efficiency 2 Objectives constraints and mathematical formulations 3 Key methods and techniques for creating schedules 4 Recent developments that improve the available problem solving methods 5 Actual applications demonstrating how the

methods can be used 6 Future directions in which the field of research is heading Collectively the chapters provide a comprehensive state of the art review of models and methods for scheduling the delivery of patient care for all parts of the healthcare system Chapter topics include setting appointments for ambulatory care and outpatient procedures surgical scheduling nurse scheduling bed management and allocation medical supply logistics and routing and scheduling for home healthcare
