Management of Chemical Casualties Handbook Gary Hurst, 2014-11-19 NOTE NO FURTHER DISCOUNT FOR THIS PRODUCT OVERSTOCK SALE Significantly reduced list price This is a manual for healthcare providers caring for victims of chemical attacks or accidents It will increase the level of preparedness and response capability of military and civilian practitioners responsible for chemical casualty care It describes each type of agent in detail in the medical management for each along with detection and decontamination techniques and equipment Chemical biological and mid spectrum agents are often referred to as weapons of mass destruction or WMDs and the official military definition of WMD includes these three kinds of agents Chemical agents biological agents toxins and point sources of radiation may cause mass casualties while leaving structures intact a better term for these kinds of weapons is mass casualty weapons or MCWs Unconventional weapons is a term used to refer to chemical agents biological agents toxins nuclear and thermonuclear bombs radiological dispersal devices or RDDs also called dirty bombs and point sources of radiation used as weapons The list of chemical

warfare agents officially designated as such by the US military includes those chemicals that are intended to cause death or serious injury and also those intended to cause incapacitation that is temporary inability to perform one's military duties. The former are called toxic agents and include 1 lung damaging agents also called pulmonary or choking agents 2 blood agents specifically cyanide compounds 3 vesicants blistering agents and 4 nerve agents. Those designed to produce only temporary incapacitation are referred to as incapacitating agents. This handbook will address each of these groupings of official chemical warfare agents as well as riot control agents which are technically not chemical warfare agents according to the US military definition but are widely used in law enforcement for mass incapacitation. Chemical agents may have chemical names as well as common names. Chemical agents developed for military use may also have a NATO code. The NATO code is a one to three letter designation assigned after World War II to provide standard recognizable shorthand identification. For example the chemical compound O isopropyl methylphosphonofluoridate has the common name sarin and the NATO code GB. This handbook will use NATO codes as well as common names for chemical agents.
