Challenging and Emerging Conditions in Emergency Medicine Arvind Venkat, 2011-05-03 With growing numbers of chronically ill patients surviving longer and receiving novel medical and surgical treatments emergency departments are increasingly the venue for associated acute presentations How can emergency physicians respond to these challenging and emerging conditions This book focuses on the unusual and complex disease presentations not covered in detail in the standard textbooks helping you manage patients with conditions such as congenital heart disease cystic fibrosis morbid obesity intellectual disability and intestinal failure Not only does this book provide guidance on evaluation and diagnosis but it also addresses the practical issues of acute management and continuing referral The individual chapters are written by high profile emergency physicians in conjunction with appropriate specialists and include authoritative evidence to back up the clinical information Renal Transplant - ECAB Vijay Kher, 2013-01-10 Kidney transplantation is one of the breakthroughs in medical science The most important consideration in the procedure is the natural tendency of the human immune system to reject any foreign tissue be it a harmful bacteria or a life saving kidney After transplantation the immune system of the patient will reject the kidney in no time The answer to the

solution has been the tremendous development in the identification and use of immunosuppressive medicines. But on the other hand, as we reduce the strength of the immune system, the patients are highly prone to infections and it can cause life-threatening infections if left undiagnosed. So the greatest job of the nephrologist is to balance the immune system to a level where the kidneys are not rejected and at the same time keep the immune system at a level where the infections are kept under control. This is akin to walking on a tight rope. The last few years witnessed significant improvisations in kidney transplantation: the introduction of newer immunosuppressive drugs to increase the success rates of transplantation; steps to increase the donor availability by doing ABO incompatible transplantation and by performing transplants from non-heart-beating donors; and lastly, kidney removal from the donor through laparoscopic donor nephrectomy. This book focuses on the various aspects of choosing the donor, donor nephrectomy, the outpatient care of the donor and the recipient, and also the legal and ethical issues related to the same.

Care of Adults with Chronic Childhood Conditions Alice A. Kuo, Mariecel Pilapil, David E. DeLaet, Cynthia Peacock, Niraj Sharma, 2024-07-18. This book addresses the unique healthcare needs of adults with chronic childhood illnesses. It presents a model of primary and secondary prevention for emerging adulthood: primary prevention in which all young adults are screened for high-risk behaviors and health needs, and secondary prevention in which young adults with chronic childhood conditions are optimized through coordinated care connections to community resources and social/family support. Now in its revised and expanded second edition, this book is organized in seven parts. Part I provides a detailed overview of the health care transition from pediatrics to adult medicine from both a policy and practice perspective. New topics in this section include telemedicine as a tool to optimize transition care and systems of care models of care that include practical steps on how to get transition transfer done or care for these patients in the appropriate setting. In Part II, the concept of emerging adulthood as a developmental period is explored, and strategies for providing improved comprehensive care for this age group are discussed. A section on addressing health maintenance has been added to this edition. Part III reviews specific chronic childhood conditions such as attention deficit hyperactivity disorder, autism, cystic fibrosis, and diabetes mellitus, and offers clinical cases and summary reports that can be used as a quick guide to each condition. Several new conditions have been added to this section, including metabolic issues, conditions eating disorders, transgender medicine, and childhood endocrine conditions. Section IV is a completely new section that focuses on hospital medicine. Chapters within this section include pre-op clearance, maintaining safety, neurodiversity considerations, ER issues, and triaging emergencies, contact with PCP, adult issues not addressed, pediatric issues often overlooked, inpatient transition policies/procedures, Med/Peds Transition, palliative care, hospice, and unique inpatient cases. In Part V, additional clinical considerations that are not necessarily condition-specific but are highly relevant to the care of young adults with chronic childhood conditions are examined. Part VI describes the socio-legal issues involved in caring for this population. Finally, Part VII is another completely new section that focuses on public health and population considerations. Chapters in this section

include telemedicine disaster preparedness quality improvement health care services mental health psychiatry neurodiversity and addressing equity and racism Written by experts in the field **Care of Adults with Chronic Childhood Conditions 2e** provides primary care providers with a new framework for the care of young adults and identifies opportunities to influence patient health outcomes over a life trajectory **Absolute Nephrology Review** Alluru S.
