Dutton, W.G. Oldham, 2012-12-06 P Antognetti University of Genova Italy Director of the NATO ASI The key importance of VLSI circuits is shown by the national efforts in this field taking place in several countries at different levels government agencies private industries defense departments As a result of the evolution of IC technology over the past two decades component complexity has increased from one single to over 400 000 transistor functions per chip Low cost of such single chip systems is only possible by reducing design cost per function and avoiding cost penalties for design errors Therefore computer simulation tools at all levels of the design process have become an absolute necessity and a cornerstone in the VLSI era particularly as experimental investigations are very time consuming often too expensive and sometimes not at all feasible As minimum device dimensions shrink the need to understand the fabrication process in a quantitative way becomes critical Fine patterns thin oxide layers polycrystalline silicon interconnections shallow junctions and threshold implants each become more sensitive to process variations Each of these technologies changes toward finer structures requires increased understanding of the process physics In addition the tighter requirements for process control make it imperative that sensitivities be understood and that optimization be used to minimize the effect of statistical fluctuations

Algorithmic Problems in Groups and Semigroups Jean-Camille Birget, Stuart Margolis, John Meakin, Mark V. Sapir, 2012-12-06 This volume contains papers which are based primarily on talks given at an international conference on Algorithmic Problems in Groups and Semigroups held at the University of Nebraska Lincoln from May 11 May 16 1998 The conference coincided with the Centennial Celebration of the Department of Mathematics and Statistics at the University of Nebraska Lincoln on the occasion of the one hundredth anniversary of the granting of the first Ph D by the department Funding was provided by the US National Science Foundation the Department of Mathematics and Statistics and the College of Arts and Sciences at the University of Nebraska Lincoln through the College's focus program in Discrete Experimental and Applied Mathematics The purpose of the conference was to bring together researchers with interests in algorithmic problems in group theory semigroup theory and computer science A particularly useful feature of this conference was that it provided a framework for exchange of ideas between the research communities in semigroup theory and group theory and several of the papers collected here reflect this interaction of ideas The papers collected in this volume represent a cross section of some of the results and ideas that were discussed in the conference They reflect a synthesis of overlapping ideas and techniques stimulated by problems concerning finite monoids

Numerical Methods in Mechanics of Materials Ken Chong, Arthur Boresi, Sunil Saigal, James Lee, 2017-11-27 In the dynamic digital age the widespread use of computers has transformed engineering and science A realistic and successful solution of an engineering problem usually begins with an accurate physical model of the problem and a proper understanding of the assumptions employed With computers and appropriate software we can model and analyze complex physical systems and problems However efficient and accurate use of numerical results obtained from computer programs requires considerable background and advanced working knowledge to avoid blunders and the blind acceptance of computer results This book provides the background and knowledge necessary to avoid these pitfalls especially the most commonly used numerical methods employed in the solution of physical problems It

offers an in depth presentation of the numerical methods for scales from nano to macro in nine self contained chapters with extensive problems and up to date references covering Trends and new developments in simulation and computation
