

Diamond like carbon

- Diamond-like carbon (DLC) is a type of amorphous carbon material that displays some of the typical properties of diamond
- It is highly valued for its hardness and durability, making it ideal for protective coatings in tools and electronics
- DLC also exhibits low friction and high resistance to wear, which is beneficial for applications in mechanical parts
- Additionally, its ability to be deposited at relatively low temperatures makes it suitable for a wide range of substrates

Practical example: Electronics

- Diamond-like carbon (DLC) coatings are used in electronics to enhance the durability and longevity of components
- These coatings are thin, yet they possess similar properties to diamonds, such as high hardness and resistance to wear
- In electronics, DLC is applied to parts like connectors and semiconductors, reducing friction and protecting against physical and chemical wear
- This application ensures that devices operate more reliably over a longer period, improving product performance and customer satisfaction
