

Holt Physics Chapter 6: Momentum and Collisions

I. Section 6-1: Momentum and impulse

- A. Linear Momentum describes the force or energy that a moving object carries with it. Momentum can be transferred through collisions
- B. Momentum is defined as an object's mass multiplied by its velocity. Momentum is a vector quantity whose sign depends on its velocity.

Momentum

$$\mathbf{p} = m\mathbf{v}$$

momentum = mass x velocity

- C. You can think of momentum as the force or energy needed to stop a moving, massive object.
- D. A change in momentum takes force and time
- E. Impulse is a change in momentum
- F. Impulse Momentum Theorem introduces the concept of time to momentum and states simply that a force applied over a time will change momentum due to the change in velocity.

Impulse-momentum Theorem

$$\mathbf{F}\Delta t = \Delta \mathbf{p} \quad \text{or} \quad \mathbf{F}\Delta t = \Delta \mathbf{p} = m\mathbf{v}_f - m\mathbf{v}_i$$

Force x time interval = change in momentum

II. Section 6-2: Conservation of Momentum

- A. Energy is transferred in collisions (ignoring friction) and momentum is conserved.
- B. The Law of Conservation of Momentum: "The total momentum of all objects interacting with one another remains

Nucleon-nucleon Interaction And The Nuclear Many-body Problem, The: Selected Papers Of Gerald E Brown And T T S Kuo Gerald E Brown, Thomas T S Kuo, Sabine Lee, Jeremy William Holt, 2010-07-05 This book provides a comprehensive overview of some key developments in the understanding of the nucleon nucleon interaction and nuclear many body theory The main problems at the level of meson exchange physics have largely been solved and we now have an effective nucleon nucleon interaction pioneered in a renormalization group formalism by several of us at Stony Brook and our colleagues at Naples which is nearly universally accepted as the unique low momentum interaction that includes all experimental information to date Our present understanding of these issues is based on a multi step development in which different scientific insights and a wide range of physical and mathematical methodologies fed into each other It is best appreciated by looking at the steps along the way starting with the pioneering work of Brueckner and his collaborators that

was just as necessary and important as the insightful improvements to Brueckner's theory by Hans Bethe and his students. Moving on from these microscopic methods for nuclear structure calculations using the Brueckner G matrix and later low momentum nucleon interactions were developed and applied. With their influential 1967 paper Brown and Kuo prepared the effective theory that allowed the description of nuclear properties directly from the underlying nucleon-nucleon interaction. Later the addition of Brown-Rho scaling to the one-boson exchange model deepened the understanding of nuclear matter saturation, carbon-14 dating and the structure of neutron stars. *Civil Engineering Hydraulics Abstracts*, 1979

The Nucleon-nucleon Interaction and the Nuclear Many-body Problem Gerald E. Brown, Jeremy William Holt, Thomas Tzu Szu Kuo, 2010. This book provides a comprehensive overview of some key developments in the understanding of the nucleon-nucleon interaction and nuclear many-body theory. The main problems at the level of meson exchange physics have been solved and we have an effective field theory using a phenomenological interaction pioneered by Achim Schwenk and Scott Bogner which is nearly universally accepted as a unique low momentum interaction that includes all experimental data to date. This understanding is based on a multi-step development in which different scientific insights and a wide range of physical and mathematical methodologies fed into each other. It is best appreciated by looking at the different steps along the way, starting with the pioneering work of Brueckner and his collaborators that was just as necessary and important as the insightful masterly improvements to Brueckner's theory by Hans Bethe and his students. Moving on from there, the off-shell effects that bedeviled Bethe's work, which had resulted in the 1963 Reference Spectrum Method, were treated relatively accurately by introducing an energy gap between initial bound states and an intermediate state. With their influential 1967 paper Brown and Kuo prepared the effective field theory. Later the introduction of Brown-Rho scaling deepened understanding of saturation in the many-body system and fed directly into recent work on carbon-14 dating. **ERDA Energy Research Abstracts** United States.
