*Developments in Surface Contamination and Cleaning - Vol 5* Rajiv Kohli, K. L. Mittal, 2012-11-29 Resumen Surface contamination is of cardinal importance in a host of technologies and industries ranging from microelectronics to optics to automotive to biomedical. Thus the need to understand the causes of surface contamination and their removal is very patent. Generally speaking there are two broad categories of surface contaminants: film type and particulates. In the world of shrinking dimensions such as the ever decreasing size of microelectronic devices there is an intensified need to understand the behavior of nanoscale particles and to devise ways to remove them to an acceptable level. Particles which were functionally innocuous a few years ago are killer defects today with serious implications for yield and reliability of the components. This book addresses the sources, detection, characterization and removal of both kinds of contaminants as well as ways to prevent surfaces from being contaminated. A number of techniques to monitor the level of cleanliness are also discussed. Special emphasis is placed on the behaviour of nanoscale particles. The book is amply referenced and profusely illustrated. Excellent reference for a host of technologies and industries ranging from microelectronics to optics to automotive to biomedical. A single source document addressing everything from the sources of contamination to their removal and prevention. Amply referenced and profusely illustrated. Developments in Surface Contamination and Cleaning: Methods for Surface Cleaning Rajiv Kohli, Kashmiri L.
