Andre, 2011-08-17 There are many obstacles in kidney transplantation For the transplant team there is the balance between immunosuppression to aid in the recipient's tolerance of the allograft and the infection risk of a suppressed immune system These potential long term complications of kidney transplantation are relatively well known but there are many other complications that patients and families do not consider when preparing themselves for a kidney transplant Although the benefits of attempting a kidney transplant far outweigh downfalls of the long term sequelae kidney transplantation is by no means a benign procedure It is the hope of these authors that the reader will leave with a sense of understanding towards the kidney recipients *Renal Transplant - ECAB* Vijay Kher, 2013-01-10 Kidney transplantation is one of the breakthroughs in medical science The most important consideration in the procedure is the natural tendency of the human immune system to reject any foreign tissue be it a harmful bacteria or a life saving kidney After transplantation the immune system of the patient will reject the kidney in no time The answer to the solution has been the tremendous development in the

identification and use of immunosuppressive medicines But on the other hand as we reduce the strength of immune system the patients are highly prone to infections and it can cause life threatening infections if left undiagnosed So the greatest job of the nephrologist is to balance the immune system to a level where the kidneys are not rejected and at the same time keep the immune system at a level where the infections are kept under control This is akin to walking on a tight rope The last few years witnessed significant improvisations in kidney transplantation the introduction of newer immunosuppressive drugs to increase the success rates of transplantation steps to increase the donor availability by doing ABO incompatible transplantation and by performing transplants from non heart beating donors and lastly kidney removal from the donor through laparoscopic donor nephrectomy This book focuses on the various aspects of choosing the donor to donor nephrectomy the outpatient care of the donor and the recipient and also the legal and ethical issues related to the same
