Yarn Production P. Lord, 1999-12 An advanced textbook covering all aspects of yarn production dealing with the technologies for a range of products including both filament and staple yarns from fibre source to yarn cone or other final package Subjects covered include filament yarn production opening and carding for short staple fibres silver preparation short and long staple spinning false twist staple systems and the economics of staple yarn production

The Economics, Science and Technology of Yarn Production Peter Reeves Lord, 1981

Technical Textile Yarns R Alagirusamy, Apurba Das, 2010-06-30 Technical yarns are produced for the manufacture of technical textiles As the range of technical textiles is rapidly increasing an understanding of the range of yarns available and their properties is

important in order to be able to meet the requirements of the intended end use Part one of the book begins by reviewing the advances in yarn production Topics examine the advances in textile yarn spinning modification of textile yarn structures yarn hairiness and its reduction and coatings for technical textile yarns The second group of chapters describes the range of technical yarns such as electro conductive textile yarns novel yarns and plasma treated yarns for biomedical applications Technical sewing threads and biodegradable textile yarns are also discussed Technical textile yarns provides essential reading for yarn and fabric manufacturers textile scientists technicians engineers and technologists covering a wide range of areas within textile applications This book will also be an important information source for academics and students Provides a comprehensive overview of the variety of technical textile yarns available along with individual characteristics and production methods Documents advances in textile yarn spinning and texturing featuring compact rotor and friction spinning Assesses different types of technical yarns including plasma treated yarns for biomedical applications and hybrid yarns for thermoplastic composites

Yarn Preparation John A. Iredale, 1992 Almost all fabrics whether woven or knitted are produced from spun thread However this thread or yarn produced by the spinning operation either by a hand spinner using the simplest drop spindle or spinning wheel or spun on the latest automated spinning frame is rarely in a form suitable to be used immediately for producing a fabric A broad range of tasks must be undertaken before the actual fabric production is reached Yarn Preparation is concerned with the preparation of yarns which have been spun from staple fibres and describes the post spinning processes prior to fabric manufacture such as yarn doubling winding and spinning Covers the operations to consider when producing a fabric by even the most basic of techniques The information on basic processes machinery and equipment should assist those people involved in the production of fabrics by showing ways to improve the quality to the end product Includes a list of suppliers sources of further information and a reading list This is a valuable book which fills the need for a practical manual specifically about yarn preparation Much has been published about the main textile areas of yarn manufacture and fabric production both weaving and knitting because yarn preparation tends to be a series of link operations there have been very few books specifically directed to this area of processing The Small Scale Textiles series aims to present basic information about all aspects of small scale textile manufacture from raw materials to finished products and will be of use to fieldworkers development agencies and those starting small scale manufacture or attempting to improve or extend manufacture

Yarn Texturing Technology J. W. S. Hearle, L. Hollick, D. K. Wilson, 2001-01-01 This book covers all the major techniques including twist texturing jet screen texturing false twist process BCF processes and air jet texturing in detail It is invaluable for yarn and fabric manufacturers textile scientists and students on textile science and technology courses Texturing is increasingly important in textile production not only in yarns for weaving and knitting fashion products but also for carpets furnishing fabrics and a variety of technical textiles This new book covers all the major techniques including twist texturing jet screen texturing false twist process BCF processes and air jet

texturing are in detail Combining a comprehensive review of the physics and chemistry of texturing with a thorough illustrated description of current practice this book will be invaluable for yarn and fabric manufacturers textile scientists and students on textile science and technology courses Published in association with The Textile Institute **Fancy Yarns** R H Gong, R M Wright, 2002-10-11 Fancy yarns are those produced with some deliberate discontinuity introduced either into the colour or form of the article with the intention of producing an enhanced aesthetic impression Most fancy yarns are produced by specialist spinners using machines modified or specially developed for the purpose others are produced from fancy slivers used as minor components of yarns made by spinners with normal equipment still others are made exclusively by filament yarns using adaptations of the airjet texturing process The text is well illustrated with diagrams drawings and photographs of yarn structures and the equipment used to create them It contains close ups of the yarns themselves together with an analysis to show how appearance and texture can be varied by changing the feedstock or machine settings Textile historians and conservationists will find the book especially useful in helping to identify yarn types in historical fabrics and in developing an understanding of the variety of yarns available in antiquity and typical uses for them Fancy yarns is an essential reference to a wide range of industrial textile technologists including spinners knitters and weavers fabric and garment manufacturers students of textile technology and design and curators and conservationists of historical textile collections The first book to be devoted exclusively to fancy yarns and fancy doubled yarns Describes all the major yarn types their manufacture and potential for use in garments and furnishing fabrics Includes over 100 drawings diagrams and photographs Evenness Testing in Yarn Production R. Furter, 1982 **Yarn Technology** N.S.Kaplan, 2008-01-01 This handy book on yarn technology is a result of years hard work of the author He tried to deliver maximum in minimum pages to keep it handy for students teachers and scholars This book is not prepared to cover the curriculum of any particular diploma or degree courses but emphasis is given on the subject This edition provides all the basic information needed like 1 The nature of Textiles 2 Textile fiber production 3 Production of synthetic fibers 4 yarn production 5 Carding Process 6 Process parameters in blow room 7 Carding spinning 8 Traditional fabric production 9 Fabric treatment process etc By and large the book is *Yarn and Cloth Making* Mary Lois Kissell, 1918 Yarn Production P. Grosberg, C. Iype, 1999-01-01 This new text provides a comprehensive but introductory guide to key theoretical aspects of yarn production It summarizes unifies and explains a large body of recent literature devoted to theoretical and experimental studies of this area of textile technology The basic analytical tools provided will be useful to textile engineers in quantifying the solutions to a whole range of textile processing problems Two introductory chapters provide a foundation of practical information The first is a 36 page review of present day yarn production technology including a discussion of fiber properties and sources the principal methods of yarn production and their underlying principles and yarn formation The second introductory chapter covers the forces that act on fibers and yarns in the course of processing and the effect and use of these forces in fiber alignment and straightening

Following basic areas of yarn production theory are examined drafting theory fiber blending ballooning theory and tension and twist changes along a threadline Analytical tools and simplified solutions are provided for each area of theory The text is supplemented by more than 90 diagrams flowcharts graphs and other schematics that illustrate processes and theoretical concepts The information in this new text will be useful to textile process engineers involved in fiber and yarn production
