

Handwriting Analysis

Handwriting analysis, or graphology, is the study of the way in which a person writes.

Handwriting is unique to each individual. Although some people's handwriting may have similar styles and characteristics, no two people, except identical twins, have identical handwriting. By comparing letters and words, that tend to look the same in different people's writing, you can learn about their personality and their emotional state.

Generally, one cannot determine the age or sex of a person or whether they are left-handed or right-handed from a normal writing sample. Compare types of formation and characteristics in writing styles and detailed examination of an original document can give hints as to some of these characteristics.

In handwriting analysis, one should look for variations in the shape, style, alignment, and spacing of letters.

Handwriting Analysis Chart. This chart is used to analyze handwriting. It is divided into two columns: Handwriting and Analysis. The Handwriting column contains six boxes, each showing a different letter or word written in a different style. The Analysis column contains six boxes, each showing a different letter or word written in a different style.
