Fluid Dynamics Atul Sharma, 2016-09-26 This book is primarily for a first one semester course on CFD in mechanical chemical and aeronautical engineering Almost all the existing books on CFD assume knowledge of mathematics in general and differential calculus as well as numerical methods in particular thus limiting the readership mostly to the postgraduate curriculum In this book an attempt is made to simplify the subject even for readers who have little or no experience in CFD and without prior knowledge of fluid dynamics heat transfer and numerical methods The major emphasis is on simplification of the mathematics involved by presenting physical law instead of the traditional differential equations based algebraic formulations discussions and solution methodology The physical law based simplified CFD approach proposed in this book for the first time keeps the level of mathematics to school education and also allows the reader to intuitively get started with the computer programming Another distinguishing feature of the present book is to effectively link the theory with the computer program code This is done with more pictorial as well as detailed explanation of the numerical methodology Furthermore the present book is structured for a module by module code development of the two dimensional numerical formulation the codes are given for 2D heat conduction advection and convection The present subject involves learning to develop and effectively use a product a CFD software The details for the CFD development presented here is the main part of a CFD software Furthermore CFD application and analysis are presented by carefully designed example as well as exercise problems not only limited to fluid dynamics but also includes heat transfer The reader is trained for a job as CFD developer as well as CFD application engineer and can also lead to start ups on the development of apps customized CFD software for various engineering applications Atul has championed the finite volume method which is now the industry standard He knows the conventional method of discretizing differential equations but has never been satisfied with it As a result he has developed a principle that physical laws that characterize the differential equations should be reflected at every stage of discretization and every stage of approximation This new CFD book is comprehensive and has a stamp of originality of the author It will bring students closer to the subject and enable them to contribute to it Dr K Muralidhar IIT Kanpur INDIA
