Gislason,2018-05-30 This book provides a fresh perspective on world religions I describe some of the more obvious religious traditions on the planet and note similarities and differences I am writing brief descriptions as if I were a tour guide introducing a stranger to the history real and imagined of five of the more obvious religions My wish is that even people who live in the cognitive box created by one group will take a vacation fly outside of your container and enjoy an overview of humans past present and future If you can go beyond beliefs faith claims arguments and the narcissism that afflicts all of us then you ask does membership in any religious group bring us closer to living in a peaceful constructive sustainable society From the Preface Any discussion of religion invites misunderstanding and conflict Humans have convened in small groups for thousands of years to celebrate to appease evil spirits and to encourage good spirits to offer more privileges and benefits Humans continue to dress up in costumes beat drums chant sing and dance and make offerings to innumerable gods These

celebrations help to maintain group unity and often induce euphoric feelings in the participants While there has always been an archetypal form to these group activities each local group develops its own version of myths rituals and celebrations The belief in spirits is the universal form The names number and idiosyncratic expressions of the spirits is the local content If you consider religious expressions around the world and throughout history you would notice that there a number of basic themes with thousands of imaginative variations You also notice that in every tribe village or city people believe they have special relationships with gods and spirits not enjoyed elsewhere No discussion of religion will make sense until the importance of group identity is understood Humans may sometimes look like individuals but the truth is that all humans are members of local groups that determine what they know how they communicate and how they treat other humans Each local group develops stories beliefs and rules Collections of local groups with special beliefs into larger organizations are often described as religion Members of local groups are described as religious if they recite group slogans attend meetings and celebrations Religions often claim special privileges for their members so that the term religious is used to claim advantages and superior moral authority where none actually exists The tendency for selective even exclusive group membership is deeply embedded in the human mind and shows up everywhere and at all times The key elements of group identity are recognizable appearance enhanced by costumes common language common beliefs and common behaviors especially ritualistic behaviors Download eBook in PDF format

Human Nature Stephen Gislason, 2017-07-05 Preface Being a human is challenging Human life is a journey thorough time and space with many obstacles injury disease constant uncertainty and relentlessly difficult interactions with other humans Each human is the reincarnation of a long lineage of

ancestors Species memory perceptual skills needs drives feelings desires and behaviors are built in and begin operating in utero Humans evolved from primate ancestors and retained features of mind and behavior that have been present in animals for hundreds of millions of years Urges desires designs feelings cry out from within and often surprise us as if we were the hosts to wild animals and spirits within that refuse to be identified or tamed Human behavior can be understood in relation to the whole spectrum of primate behaviors and social organizations Humans appear to have an eclectic combination of primate tendencies with elaboration of features such as tool making symbolic reasoning and spoken language Linda Stone suggested that Primates are a natural grouping of mammals that includes prosimians tree dwelling animals such as lemurs and tarsiers monkeys apes and humans Some of the physical characteristics that distinguish primates from other mammals are binocular vision and the grasping hand with mobile digits and flat nails Evolutionary trends characteristic of the Primate Order are most pronounced in humans and include prolongation of gestation of the fetus prolongation of the period of infant care and expansion and elaboration of the brain An important feature in the social life of many nonhuman primates is dominance and the formation of dominance hierarchies a dominant animal wins aggressive encounters with others and usually has greater access to resources such as food water or sexual partners Rather than viewing society and culture as real things an observer can recognize that humans live in groups that repeat and modify innate behaviors to produce prolific variations on a few underlying themes that are common to all societies A smart observer will consider the grouping characteristics of humans and discern basic patterns and problems underlying the apparent complexity of modern civilization The organization of society begins with small local clusters that link family groups into clans that are more or less cooperative units Clans associate forming bands that tend to affiliate with other bands forming tribes looser affiliations that occupy larger geographic areas The band tribal structure emerges from ancient animal groupings Patterns of organization rules and institutions that regulate human behavior are in flux and will continue to be unstable As human populations expand and interactions become increasingly complex innate abilities are stretched and distorted The ability of individuals to relate to other humans remains limited and limits the effective management of enlarging groups Managers and leaders do not become smarter as the organizations they lead become larger It is axiomatic that organizations that exceed a threshold number become dysfunctional It is matter of empirical study to recognize group size thresholds and too little is known about the cognitive limitations of leaders
