Sustainable Materials Processing and Manufacturing Lin Zhu, Tien Chien Jen, 2024-11-25 The conference on Substantial Materials Processing and Manufacturing SMPM aims to bring together scientists researchers and companies to attend and share their vision ideas recent developments as well as advanced scientific and technical knowledge in the field of materials processing and manufacturing The conference is concerned with sustainable engineering life cycle engineering sustainable manufacturing systems and technologies sustainable materials and processing sustainable product design and development sustainable supply chain and business models renewable energy and sustainable development Industry 4.0 and Internet of Things modelling and simulation of sustainable manufacturing intelligent agricultural equipment etc The conference has invited some academicians and research leaders in related fields to give the keynote report Based on the theme of this book eighteen outstanding and high quality manuscripts have been selected for the publication in this book The detailed information is presented below

Mechanics of Materials Christopher Jenkins, Sanjeev Khanna, 2005-03-15 The unifying treatment of structural design presented here should prove useful to any engineer involved in the design of structures A crucial divide to be bridged is that between applied mechanics and materials science The onset of specialization and the rapid rise of technology however have created separate disciplines concerned with the deformation of solid materials Unfortunately the result is in many cases that society loses out on having at their service efficient high performance material structural systems We follow in this text a very methodological process to introduce mechanics materials and design issues in a manner called total structural design The idea is to seek a solution in total design space The material presented in this text

is suitable for a first course that encompasses both the traditional mechanics of materials and properties of materials courses. The text is also appropriate for a second course in mechanics of materials or a follow-on course in design of structures taken after the typical introductory mechanics and properties courses. This text can be adapted to several different curriculum formats, whether traditional or modern. Instructors using the text for a traditional course may find that the text in fact facilitates transforming their course over time to a more modern integrated approach. BOOK JACKET
