Bonding, Structure and Solid-state Chemistry Marcus Frederick Charles Ladd,2016 This book provides a study in Bonding Structure and Solid State Chemistry It is based on lecture courses given over several years but is not directed at any particular degree course Thus it will find a place in all years of first degree courses in both chemistry and those subjects for which chemistry forms a significant part It will also prepare readers for more intensive study in the title topics Pre knowledge is assumed in mathematics and physical sciences at about final year high school level Additional mathematical and other topics are presented where necessary as appendices so as not to disturb the flow of the main text The book is copiously illustrated including many stereoscopic diagrams with practical advice on correct viewing and colour illustrations A suite of computer programs some of which are interactive has been devised for the book and is available on line from the publisher s website global.oup.com/booksites/content/9780199670888 They are available for both 32 and 64 bit operating systems and are easily executed on a PC or laptop notes on their applications are provided Problems have been devised for each chapter and fully worked tutorial solutions are included After an introductory chapter the book presents a study based on the main interactive forces responsible for cohesion in the solid state of matter No classification is without some ambiguity but that chosen allows for a structured discussion over a wide range of compounds Each chapter includes worked examples on the study topics which together with the problems provided should ensure a thorough understanding of the textual material

Integrated Solar Fuel Generators Ian D Sharp,Harry A Atwater,Hans-Joachim Lewerenz,2018-09-10 With the rapid worldwide increase of interest and excitement about the promise of artificial photosynthesis for renewable fuels the research community is beginning to focus on the challenges of integrating the various components into complete unassisted solar fuel generators Integrated Solar Fuel Generators discusses the scientific and engineering efforts addressing the challenges of building complete integrated artificial photosystems that will form the basis for developing a solar fuels technology Building on recent substantial progress towards efficient semiconductor light absorbers and robust earth abundant heterogeneous catalysts for water oxidation and proton reduction by the community the integration of these components into efficient durable generators suitable for scale up moves into focus To succeed a broad range of materials processing and design issues need to be addressed to meet efficiency stability and scalability requirements This book describes the critical areas of research and development towards viable integrated solar fuels systems the current state of the art of these efforts and outlines future research needs that will accelerate progress

Polymer Science: A Comprehensive Reference, 2012-12-05 The progress in polymer science is revealed in the chapters of Polymer Science A Comprehensive Reference Ten Volume Set In Volume 1 this is reflected in the improved understanding of the properties of polymers in solution in bulk and in confined situations such as in thin films Volume 2 addresses new characterization techniques such as high resolution optical microscopy scanning probe microscopy and other procedures for surface and interface characterization Volume 3 presents the great progress achieved in precise synthetic polymerization techniques for vinyl monomers to control macromolecular architecture the development of metallocene and post metallocene catalysis for olefin polymerization new ionic polymerization procedures and atom transfer radical polymerization nitroxide mediated polymerization and reversible addition fragmentation chain transfer systems as the most often used controlled living radical polymerization methods Volume 4 is devoted to kinetics mechanisms and applications of ring opening polymerization of heterocyclic monomers and cycloolefins ROMP as well as to various less common polymerization techniques Polycondensation and non chain polymerizations including dendrimer synthesis and various click procedures are covered in Volume 5 Volume 6 focuses on several aspects of controlled macromolecular architectures and soft nano objects including hybrids and bioconjugates Many of the achievements would have not been possible without new characterization techniques like AFM that allowed direct imaging of single molecules and nano objects with a precision available only recently An entirely new aspect in polymer science is based on the combination of bottom up methods such as polymer synthesis and molecularly programmed self assembly with top down structuring such as lithography and surface templating as presented in Volume 7 It encompasses polymer and nanoparticle assembly in bulk and under confined conditions or influenced by an external field including thin films inorganic organic hybrids or nanofibers Volume 8 expands these concepts focusing on applications in advanced technologies e g in electronic industry and centers on combination with top down approach and functional properties like conductivity Another type of functionality that is of rapidly increasing importance in polymer science is introduced in volume 9 It deals with various aspects of polymers in biology and medicine including the response of living cells and tissue to the contact with biofunctional particles and surfaces The last volume is devoted to the scope and potential provided by environmentally benign and green polymers as well as energy related polymers They discuss new technologies needed for a sustainable economy in our world of limited resources Provides broad and in depth coverage of all aspects of polymer science from synthesis polymerization properties and characterization methods and techniques to nanostructures sustainability and energy and biomedical uses of polymers Provides a definitive source for those entering or researching in this area by integrating the multidisciplinary aspects of the science into one unique up to date reference work Electronic version has complete cross referencing and multi media components Volume editors are world experts in their field including a Nobel Prize winner

Chemical Elements ,
Iron-Catalyzed C-H/C-H Coupling for Synthesis of Functional Small Molecules and Polymers Takahiro

Doba,2023-07-24 This thesis describes the development of iron catalyzed thienyl C H C H coupling This is applied to the synthesis of highly conjugated and electron rich thiophene compounds of interest in materials science by utilization of low redox potential of iron in combination with a mild oxalate oxidant Transition metal catalyzed C sp² H C sp² H coupling has attracted much attention as one of the most straightforward methods to construct C sp² C sp² bonds However application of this ideal transformation to the synthesis of redox sensitive pi materials was hindered by the requirement of a strong oxidant for catalyst turnover This limitation originates primarily from the large redox potential of conventional transition metal catalysts such as palladium and rhodium This thesis shows that the efficiency of C H activation was significantly improved by introduction of a new conjugated tridentate phosphine ligand giving direct access to polymeric thiophene materials from simple thiophene monomers Considering the importance of environmentally friendly organic synthesis in terms of UN Sustainable Development Goals the reactions described herein highlight the potential of iron the most abundant transition metal on earth for the direct synthesis of functional small molecules and polymers of importance in energy device applications
