Ecological and Silvicultural Strategies for Sustainable Forest Management T. Fujimori, 2001-10-08 Recognizing the increased interest in forest management world wide this book addresses the current knowledge gap by defining sustainable forest management clarifying methods by which ecological knowledge can be applied and how traditional silvicultural methods can be improved Sustainable forest management involves the enhancement of various aspects of forest functions such as conservation of biodiversity conservation of soil and water resources contribution to the global carbon cycle as well as wood production To establish ecological and silvicultural theories to enhance these functions harmoniously recognizing the relationship between stand structures and their functions is essential This volume presents target stand structures for aimed forest functions in relation to stand development stages as well as ecological and silvicultural methods to lead and maintain them Ecological and silvicultural strategies are discussed both on stand and landscape levels and from local to international levels in temperate and boreal forest zones

Forest Products Research and Development Organizations in a Worldwide Setting ,2007 Located in 23 countries 40 forest products research and development organizations outside the United States were reviewed in 2004 and 2005 The intent was to obtain a better understanding of how such organizations are structured and administered and their performance judged Investing over 600 million annually the 40 organizations employed 7 000 to 7 500 scientists and supporting staff Especially noteworthy about the organizations are the many ways in which they identify themselves such as institutes laboratories centers their long history of sustained involvement in forest products research and their movement from public to private ownership whole or in part The distinction between public and private sector responsibility for research is blurry with these organizations as often they have public sponsorship yet private operation and management They offer a wide range of services to clients yet have complex ownership and partnering arrangements Their organizational structures are seemingly scrambled with forest product research subunits located within larger parent organizations with broad multisector research responsibilities and specialized services to a single major group of clients These organizations have an intense desire to meet the needs of clients and feature the following synthesis of existing information as an important service fees charged for services provided strategic interest in clients located throughout the world educational and degree granting activities multiple sources of income and revenue diverse standards for measuring performance adept response to broad economic social changes multiple location of physical facilities and differing degrees of publicly available information describing mission and operation of organizations

Timber and the Forest Service David A. Clary, 1988-12-01 Nearly one quarter of America is covered with forests almost 800 million acres There are 151 national forests comprising close to 200 million acres in thirty nine states and Puerto Rico These protected lands are administered by the U S Forest Service an agency of the Department of Agriculture David

Clary here examines the history of and controversies surrounding the Forest Service's policies for timber management in our national forests. In this first in depth study of the political bureaucratic social and ideological relationships between the Forest Service and the production of timber, Clary traces the continuity in the agency's outlook from its creation in 1905 through fears of a timber famine to the clear cutting controversies of the mid 1970s. He shows convincingly that despite legislative remedies and agency reports, timber production has remained the agency's first priority and that other multiple uses, recreation, watershed protection, wilderness, livestock grazing, and wildlife management were regulated so that they would not interfere with potential timber harvests. Throughout its history, the agency is shown to have been enchanted with the objective of producing timber. Clary's theme in what he describes as an administrative, political, scientific, and anecdotal history is that the Forest Service exhibited consistent actions and attitudes over the years and failed to confront realistically changes in the national culture that altered what the American people wanted from the forests and the Forest Service.

Applied forest management for tropical and subtropical plantations William Ladrach, 2013-01-01. Global demand for forest products is increasing daily. This implies an incremental pressure on tropical and subtropical forests to supply wood products. Natural forests continue to supply wood although their capacity is decreasing steadily. We are depending more and more on forest plantations to satisfy industrial needs for solid wood as well as pulpwood. Fortunately, the warm climates have an enormous potential to produce wood fiber when the production is based on applied science. By selecting the appropriate species for given sites and the use of the principles of silviculture and genetic improvement, tree plantations can often produce more than 50 m³ ha year. Because of their capacity for rapid growth, the tropical and subtropical regions have a great advantage over the temperate regions. William Ladrach has dedicated more than 40 years to the research and management of forest plantations in various parts of the world, principally in Central and South America. This book, *Applied Forest Management for Tropical and Subtropical Plantations*, provides a guide to future forest production. It is a guide to applied forestry and covers subjects from viewpoints of the biological, ecological, economic, and industrial sciences. This work is of great value to foresters, students, industrial managers, researchers, and others who work in equatorial countries. It will have a strong and positive impact on the establishment of tree plantations during the coming decades. New Perspectives
