Scale-Free Networks Guido Caldarelli, 2007-05-03 Many different systems both in nature and in technology can be described by means of networks of interconnected components Despite their different aspects all of them share similar mathematical properties In this book we explain how to recognize these features and why these different systems develop Principles of Big Graph: In-depth Insight ,2023-01-24 Principles of Big Graph In depth Insight this common structure Volume 128 in the Advances in Computer series highlights new advances in the field with this new volume presenting interesting chapters on a variety of topics including CESDAM Centered subgraph data matrix for large graph representation Bivariate cluster and suitability analysis of NoSQL Solutions for big graph applications An empirical investigation on Big Graph using deep learning Analyzing correlation between quality and accuracy of graph clustering geneBF Filtering protein coded gene graph data using bloom filter Processing large graphs with an alternative representation MapReduce based convolutional graph neural networks A comprehensive review Fast exact triangle counting in large graphs using SIMD acceleration A comprehensive investigation on attack graphs Qubit representation of a binary tree and its operations in quantum computation Modified ML KNN Role of similarity measures and nearest neighbor configuration in multi label text classification on big social network graph data Big graph based online learning through social networks Community detection in large scale real world networks Power rank An interactive web page ranking algorithm GA based energy efficient modelling of a wireless sensor network The major challenges of big graph and their solutions A review and An investigation on socio cyber crime graph Provides an update on the issues and challenges faced by current researchers Updates on future research agendas Includes advanced topics for intensive research for researchers The Connected City Zachary P. Neal, 2012-08-06 The Connected City explores how thinking about networks helps make sense of modern cities what they are how they work and where they are headed Cities and urban life can be examined as networks and these urban networks can be examined at many different levels. The book focuses on three levels of urban networks micro meso and macro These levels build upon one another and require distinctive analytical approaches that make it possible to consider different types of questions At one extreme micro urban networks focus on the networks that exist within cities like the social relationships among neighbors that generate a sense of community and belonging At the opposite extreme macro urban networks focus on networks between cities like the web of nonstop airline flights that make face to face business meetings possible This book contains three major sections organized by the level of analysis and scale of network Throughout these sections when a new methodological concept is introduced a separate method note provides a brief and accessible introduction to the practical issues of using networks in research What makes this book unique is that it synthesizes the insights and tools of the multiple scales of urban networks and integrates the theory and method of network analysis Creativity in Load-Balance Schemes for Multi/Many-Core Heterogeneous Graph Computing: Emerging Research and

Opportunities Garcia-Robledo, Alberto, Diaz-Perez, Arturo, Morales-Luna, Guillermo, 2018-01-05 Recent years have witnessed the rise of analysis of real world massive and complex phenomena in graphs to efficiently solve these large scale graph problems it is necessary to exploit high performance computing HPC which accelerates the innovation process for discovery and invention of new products and procedures in network science Creativity in Load Balance Schemes for Multi Many Core Heterogeneous Graph Computing Emerging Research and Opportunities is a critical scholarly resource that examines trends challenges and collaborative processes in emerging fields within complex network analysis Featuring coverage on a broad range of topics such as high performance computing big data network science and accelerated network traversal this book is geared towards data analysts researchers students in information communication technology ICT program developers and Citation Analysis and Dynamics of Citation Networks Michael Golosovsky, 2019-09-26 This book deals academics with the science of science by applying network science methods to citation networks and uniquely presents a physics inspired model of citation dynamics. This stochastic model of citation dynamics is based on a well known copying or recursive search mechanism The measurements covered in this text yield parameters of the model and reveal that citation dynamics of scientific papers is not linear as was previously assumed This nonlinearity has far reaching consequences including non stationary citation distributions diverging citation trajectories of similar papers and runaways or immortal papers with an infinite citation lifespan The author shows us that nonlinear stochastic models of citation dynamics can be the basis for a quantitative probabilistic prediction of citation dynamics of individual papers and of the overall journal impact factor This book appeals to students and researchers from differing subject areas working in network science and bibliometrics

<u>Decoding Complexity</u> james glattfelder,2012-11-08 Today it appears that we understand more about the universe than about our interconnected socio economic world In order to uncover organizational structures and novel features in these systems we present the first comprehensive complex systems analysis of real world ownership networks This effort lies at the interface between the realms of economics and the emerging field loosely referred to as complexity science The structure of global economic power is reflected in the network of ownership ties of companies and the analysis of such ownership networks has possible implications for market competition and financial stability Thus this work presents powerful new tools for the study of economic and corporate networks that are only just beginning to attract the attention of scholars

Inter-firm Networks Lucio Biggiero, Robert Magnuszewski, 2023-02-17 This book examines the inter firm networks created by interlock coordination through shared directors inter board and managers inter department at various levels whole aggregate core vs peripheral companies and distribution by country and sector Presenting an empirical case study on all the limited liability or stock companies of the aerospace industry in the European Union and its interlock partners worldwide the authors shed new light on these forms of coordination Moreover they reveal the relevance of shared managers coordination and hybrid manager director interlocks The book applies advanced statistical and social network analysis alike

by combining firms attributes e g standard economic financial parameters and topological indices for firms e g centrality and cluster measures By conducting the analysis at both the aggregate network level and the cluster or corporate group level the authors show how extensive and intensive the interlock forms of coordination are especially when dealing with shared managers By testing seven hypotheses concerning the research stream on board interlocks and more broadly inter firm networks the study offers new insights into the role of the financial sector on the relations between interlock coordination and firms performance on the role of geographical technological and organizational proximity and on the relations between interlock coordination and firms size As such this book will appeal to scholars of organization studies business and management studies industrial and evolutionary economics and economic sociology as well as officers and policymakers at anti trust regulation institutions Complex Networks B.
