Scania Electrical:

The On-line Electric Vehicle Nam P. Suh, Dong Ho Cho, 2017-04-04 This book details the design and technology of the on line electric vehicle OLEV system and its enabling wireless power transfer technology the shaped magnetic field in resonance SMFIR The text shows how OLEV systems can achieve their three linked important goals reduction of CO2 produced by ground transportation improved energy efficiency of ground transportation and contribution to the amelioration or prevention of climate change and global warming SMFIR provides power to the OLEV by wireless transmission from underground cables using an alternating magnetic field and the reader learns how this is done This cable network will in future be part of any local smart grid for energy supply and use thereby exploiting local and renewable energy generation to further its aims In addition to the technical details involved with design and realization of a fleet of vehicles combined with extensive subsurface charging infrastructure practical issues such as those involved with pedestrian safety are considered Furthermore the benefits of reductions in harmful emissions without recourse to large banks of batteries are made apparent Importantly the use of Professor Suh s axiomatic design paradigm enables such a complicated transportation system to be developed at reasonable cost and delivered on time The book covers both the detailed design and the relevant systems engineering knowledge and draws on experience gained in the successful implementation of OLEV systems in four Korean cities The introduction to axiomatic design and the in depth discussion of system and technology development provided by The On line Electric Vehicle is instructive to graduate students in electrical mechanical and transportation engineering and will help engineers and designers to master the efficient timely and to cost implementation of large scale networked systems Managers responsible for the running of large transportation infrastructure projects and concerned with technology management more generally will also find much to interest them in this book

Electric Trucks Kevin Desmond, 2019-12-13 Welcomed at end of the 19th century as the solution to the severe problem of horse manure in city streets electric trucks soon became the norm for short haul commercial deliveries Though reliable they were gradually replaced by gasoline powered trucks for long haul deliveries although a fleet of electric milk trucks survived in Great Britain into the 1960s Industrial electric vehicles never disappeared from factories and ports During the past decade with the availability of the lithium ion battery the electric truck is back on the road for all payloads and all distances The

fourth in a series covering the history and future of electric transport this book chronicles the work of the innovative engineers who perfected e trucks large and small **The Greening of the Automotive Industry** G. Calabrese, 2016-04-12

An examination of the greening of the automotive industry by the path dependence of countries and carmakers trajectories Three sources of path dependency can be detected business models consumer attitudes and policy regulations The automobile is changing and the race towards alternative driving systems has started Design, Modulation, and Control of Battery-Integrated Modular Multilevel Converters for Automotive Applications Arvind Balachandran, 2025-03-20

A critical component of a battery electric vehicle BEV is the battery pack which has many series and parallel connected electrochemical cells The total power energy delivered and lifetime of the battery pack are limited by the weakest cell in the pack Battery integrated modular multilevel converters BI MMC can overcome this limitation by increasing cell level control BI MMCs have several series connected DC to AC converters with a battery module having a few series and parallel connected cells called submodules SM The research in this thesis focuses on the design modulation and control of BI MMCs The efficiency and adaptability of five basic BI MMC topologies with half bridge and full bridge SMs across three main system configurations are presented Full bridge topologies offer high efficiency some even higher than the state of the art SiC two level inverter However adapting them to BEVs requires significant architectural modifications to the BEV's electrical system The half bridge topologies require fewer architectural modifications for adaption into the BEVs However they have lower efficiency and require a larger number of SMs which increases the cost The efficiency is increased with six phase system configurations but at the cost of more SMs than three phase system configurations Another aspect of adaptability is the DC charging capabilities of BI MMCs The maximum DC charging power of the BI MMCs with the same SM semiconductor losses as during traction is derived and results show that most BI MMCs have a maximum DC charging power of about 1MW Key design parameters that affect the efficiency and cost of BI MMCs are identified They are the number of series connected cells in an SM SM DC link capacitor energy and MOSFET switching frequency BI MMCs with five to seven series connected cells per SM have the highest efficiency at an average power of 100 kW and considering phase shifted carrier based modulation Selecting the MOSFET switching frequency close to the resonant frequency of the SM DC link capacitors and the SM battery modules decreases the total efficiency Increasing or decreasing the MOSFET switching frequency increases the efficiency but affects the loss distribution between the SM DC link capacitors and the SM battery modules BI MMCs with nearest level modulation NLM have higher efficiencies than phase shifted carrier based modulation and the SiC two level inverter However using NLM with low frequency sort and select inter SM balancing methods sNLM results in an uneven distribution of battery losses among the SMs which may impact the thermal design Using NLM with cyclic submodule duty cycle rotation at the fundamental frequency gives higher efficiencies than sNLM and an even distribution of battery losses among the SMs Reconstruction of converter reference signals with a higher sample frequency

at the submodule level can be used to adapt distributed control architecture to BI MMCs The advantage is the low communication burden between the central and the SM control units Furthermore the accuracy of the SM battery currents over one fundamental period is improved and the output distortion is low Electric Road Systems for Dynamic Charging Jody Emlyn Muelaner,2022-03-11 Electric road systems ERS enable dynamic charging the most energy efficient and economical way to decarbonize road vehicles ERS draw electrical power directly from the grid and enable vehicles with small batteries to operate without the need to stop for charging The three main technologies i e overhead catenary lines road bound conductive tracks and inductive wireless systems in the road surface are all technically proven however no highway system has been commercialized Electric Road Systems for Dynamic Charging discusses the technical and economic advantages of dynamic charging and questions the current investment in battery powered and hydrogen fueled vehicles Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2022007> **Work That Makes Sense** Gwendolyn D. Galsworth,2022-06-20 This book presents the mechanics of implementing visuality on the value add level known as Work That Makes Sense WTMS The step by step WTMS process described in this book teaches operators a proven method for translating information deficits into visual solutions that take the struggle out of their day to day work As a result operators transform their work area into a work environment that speaks a work environment that by design shares vital information in the form of visual devices that help them perform their day to day work with precision and completeness At the heart of this visual conversion approach is an element unique to Galsworth's paradigm called I driven that recognizes that operators will pursue self leadership in the company's improvement initiatives if they are given the opportunity to learn how to do so Also recognized is the fact that this can only happen if associates are taught and given the opportunity to learn and apply a new system of thinking The author calls this new system visual thinking This book provides that learning pathway in detail supported by hundreds of actual visual solutions developed by operators who have followed that pathway and become visual thinkers for themselves I driven They become self leaders in control of their corner of the world and able and willing to share their strengths with others In this way the WTMS process produces a deep and abiding change in the company's work culture that builds creativity and ownership As a result the organization's leadership framework widens to include operators When effectively applied the WTMS process detailed in this book produces 15% to 30% improvement in local KPIs including productivity on time delivery quality and costs these figures are documented and presented in the pages of this book Written for operators this book includes a wealth of color photographs the majority of which are visual solutions created by visual thinkers who have lived this process for themselves All are fully captioned and thoughtfully described The book also includes twelve tasks that managers implement in support that they seek on the operator level WTMS teaches that visual devices translate information into exact behavior embedding and sustaining precision through visual solutions Precision is built in by the same operators who execute it This is the heart of an I driven visual enterprise Once learned and
