Mineralogical Analysis Applied to Forensics Mariano Mercurio, Alessio Langella, Rosa Maria Di Maggio, Piergiulio Cappelletti, 2022-11-22 This book illustrates the main modern mineralogical analytical procedures that can be applied for forensic purposes on various typologies of materials and substances and has both theoretical and practical approach. Moreover it focuses on all those challenges that can arise with forensic analysis such as the choice of the most proper mineralogical techniques as a function of the material and its quantity destructive and non destructive analyses sampling procedures mineralogical analysis of micro traces correct preparation of the samples correct calibration and analytical conditions of the laboratory instrumentation. Numerous case studies on criminal offenses against persons environment and cultural heritage are illustrated Generation, Accumulation and Production of Europe's Hydrocarbons III Anthony M. Spencer, 2012-12-06 The 30 contributions of this volume cover the main European regions for oil and gas exploration the North Sea and adjacent areas the central and eastern Mediterranean including offshore Albania central and eastern Europe including Poland Hungary the Russian platform and offshore Bulgaria. Main topics are investigations to sequence stratigraphy 3D quantitative restoration and balanced structural sections using the LOCACE equipment. Additional studies deal with a Monte Carlo method for generating models of porosity and permeability with facies characterization using wireline logs or with petrographic applications of image analysis. As further reading this volume is of significant interest for researchers in oil and gas industries but also for scientists at universities *World Directory of Crystallographers* Yves Epelboin, 2013-11-11 The 9th edition of the World Directory of Crystallographers and of Other Scientists Employing Crystallographic Methods which contains 7907 entries embracing 72 countries differs considerably from the 8th edition published in 1990. The content has been updated and the methods used to acquire the information presented and to produce this new edition of the Directory have involved the latest advances in technology. The Directory is now also available as a regularly updated electronic database accessible via e mail Telnet Gopher World Wide Web and Mosaic. Full details are given in an Appendix to the printed edition **The Origin of Arcs** F.-C. Wezel, 2013-10-22 This volume contains a collection of papers presented as distinguished guest lectures at the International Conference on The Origin of Arcs held at the University of Urbino in September 1986 under the joint sponsorship of the European Union of Geosciences and the Italian Geological Society. The workshop on island and mountain arcs has been organized with the aim of increasing our understanding of the intrinsic nature of orogenic and post orogenic processes on the basis of empiric factual data rather than particular theoretic models. Quite often a trivial piece of field data appears to bear much more weight than many fascinating hypotheses put forward by the human mind. This seems to be much more valid in geology where a special method is necessitated by the particular nature of the geological phenomena and the time concept. Every general law deduced should be rooted in the study of the earth's development in geological time. It is the editor's opinion that there must first be an inductive picture by means

of geological methods and then it must be interpreted by geophysicists in the light of physical laws The geological method must serve besides to test the historical credibility of geophysical theories It is clear that these two methods the geological historical one and the geophysical one must be complementary and the one must not substitute the other Since the problem of the structure and origin of arcs is open to several solutions different factors being still unexplained all correctly deduced opinions are considered by the editor The contributors to this pre conference volume have been asked to present essential geological results as concrete as possible on some basic problems such as Are the island and mountain arcs primary or induced features How have these orogenic festoons developed into their similar regular shapes What are the relationships between primary active arcs and secondary mountain arcs What is the dominant deformational factor in the bulging of the arc What is the real nature and tectonic significance of the Benioff zone These papers have been grouped into five more or less natural sections of which three are defined on the basis of geography But of course several range broadly and the classification serves only to channel the discussion in a practical way

Threats to the Quality of Groundwater Resources Andrea Scozzari, Elissavet Dotsika, 2015-11-27 This book focuses on scientific and technological aspects of groundwater resources assessment and surveillance It describes relevant risks and investigates selected techniques for the monitoring and mitigation of the individuated threats to groundwater quality The authors discuss the concepts of groundwater resources protection and offer examples of both geogenic and anthropogenic degradation of groundwater quality such as heavy metals from mining activities and natural water rock interactions as well as risk of contamination due to geological CO₂ storage practices etc The volume also covers non invasive monitoring techniques and briefly addresses innovative sensor technologies for the online assessment of water quality Furthermore the role played by geochemical techniques the potential of environmental isotopes and the support provided by physical modelling are highlighted The chapters guide the reader through various viewpoints according to the diverse disciplines involved without aiming to be exhaustive but instead picking representative topics for their relevance in the context of groundwater protection and control This book will be of interest to advanced students researchers policy makers and stakeholders at various levels

Cretaceous Resources, Events and Rhythms Robert N. Ginsburg, B. Beaudoin, 1990-02-28 this volume represents perhaps the best available report on state of the science cretaceous research Some may query the wisdom of grand schemes such as the GSGP believing that science is best left to the imaginative individual This useful volume offers a persuasive counter argument That it speaks with many voices if not languages is to be expected and indeed adds to its strength Cretaceous Research 11 1990

The Geology of Central Europe: Mesozoic and Cenozoic Tom McCann, 2008 Volume 2 provides an overview of the Mesozoic and Cenozoic evolution of Central Europe This period commenced with the destruction of Pangaea and ended with the formation of the Alps and Carpathians and the subsequent Ice Ages Separate summary chapters on the Permian to Cretaceous tectonics and the Alpine evolution are also included The final chapter provides an overview of the fossils fuels ore and industrial minerals
