million years ago to the present nature of the Manx environment and landscape The story of the island s colonisation by plants and animals sets the scene for the later volumes which deal with the impact of man s arrival A key element of the volume is an in depth examination of the contemporary landscape with an appraisal of how the environment has affected man and how man has affected the environment

Sand and Gravel Spits Giovanni Randazzo,Derek W.T. Jackson,J. Andrew G. Cooper,2015-04-16 This book draws together a series of studies of spit geomorphology and temporal evolution from around the world The volume offers some unique insights into how these landforms are examined scientifically and how we as humans impact them offering a global perspective on spit genesis and evolution Spits are unique natural environments whose evolution is linked to the adjacent coast and near shore morphology sediment supply coastal dynamics and sea level change Over the past century Global Mean Sea Level GMSL has risen by 10 to 20 centimetres and many coastal spits represent the first sentinel against coastal submersion Scientific research indicates that sea levels worldwide have been rising at a rate of 3 5 millimetres per year since the early 1990s roughly twice the average speed of the preceding 80 years This trend linked to global warming will undoubtedly cause major changes in spit morphology Spits are highly mobile coastal landforms that respond rapidly to environmental change They therefore represent a signature of past environmental change and provide a landform indicator of climate change
