Serge Lang Undergraduate Algebra Solutions:

Solutions Manual for Lang's Linear Algebra Rami Shakarchi, 2012-12-06 The present volume contains all the exercises and their solutions of Lang's Linear Algebra Solving problems being an essential part of the learning process my goal is to provide those learning and teaching linear algebra with a large number of worked out exercises Lang's textbook covers all the topics in linear algebra that are usually taught at the undergraduate level vector spaces matrices and linear maps including eigenvectors and eigenvalues determinants diagonalization of symmetric and hermitian maps unitary maps and matrices triangulation Jordan canonical form and convex sets Therefore this solutions manual can be helpful to anyone learning or teaching linear algebra at the college level As the understanding of the first chapters is essential to the comprehension of the later more involved chapters I encourage the reader to work through all of the problems of Chapters I II III and IV Often earlier exercises are useful in solving later problems For example Exercise 35.3 of Chapter II shows that a strictly upper triangular matrix is nilpotent and this result is then used in Exercise 7.1 of Chapter X To make the solutions concise I have included only the necessary arguments the reader may have to fill in the details to get complete proofs Finally I thank Serge Lang for giving me the opportunity to work on this solutions manual and I also thank my brother Karim and Steve Miller for their helpful comments and their support

Undergraduate Algebra Serge Lang, 2006-10-31 This book together with Linear Algebra constitutes a curriculum for an algebra program addressed to undergraduates The separation of the linear algebra from the other basic algebraic structures fits all existing tendencies affecting undergraduate teaching and I agree with these tendencies I have made the present book self contained logically but it is probably better if students take the linear algebra course before being introduced to the more abstract notions of groups rings and fields and the systematic development of their basic abstract properties There is of course a little overlap with the book Linear Algebra since I wanted to make the present book self contained I define vector spaces matrices and linear maps and prove their basic properties The present book could be used for a one term course or a year's course possibly combining it with Linear Algebra I think it is important to do the field theory and the Galois theory more important say than to do much more group theory than we have done here There is a chapter on finite fields which exhibit both features from general field theory and special features due to characteristic p Such fields have become important in coding theory

Problems and Solutions for Undergraduate Analysis Rami Shakarchi, 1997-12-19 The present volume contains all the exercises and their solutions for Lang's second edition of Undergraduate Analysis The wide variety of exercises which range from computational to more conceptual and which are of varying difficulty cover the following subjects and more real numbers limits continuous functions differentiation and elementary integration normed vector spaces compactness series integration in one variable improper integrals convolutions Fourier series and the Fourier integral functions in n space derivatives in vector spaces the inverse and implicit mapping theorem ordinary differential equations multiple integrals and differential forms My objective is

to offer those learning and teaching analysis at the undergraduate level a large number of completed exercises and I hope that this book which contains over 600 exercises covering the topics mentioned above will achieve my goal The exercises are an integral part of Lang's book and I encourage the reader to work through all of them In some cases the problems in the beginning chapters are used in later ones for example in Chapter IV when one constructs bump functions which are used to smooth out singularities and prove that the space of functions is dense in the space of regulated maps The numbering of the problems is as follows Exercise IX 5 7 indicates Exercise 7 5 of Chapter IX Acknowledgments I am grateful to Serge Lang for his help and enthusiasm in this project as well as for teaching me mathematics and much more with so much generosity and patience
