 mooring dolphins have been installed in inland waterways adjacent to jetties and waiting facilities for ship to ship
 transshipment or as crash barriers in commercial port areas throughout the world A dolphin is a marine structure that is
 frequently installed in ports waterways and other places related to marine traffic Dolphins are typically located adjacent to
 waterfront structures such as quay walls jetties locks and bridge piers The purpose of a dolphin is threefold Allow ships to
 berth and moor safely and efficiently Protect waterfront structures by acting as a crash barrier and sacrificial structure
 Direct and guide marine traffic by acting as a lead in dolphin and navigation aid The main objective of this handbook is to
 provide engineers asset managers suppliers tender teams contractors and principals with such guidance on the design and
 construction of flexible dolphins by collecting and describing knowledge of and experience with these flexible marine
 structures This handbook is intended to prevent extensive discussions during the design and construction stages of projects
 involving flexible dolphins It is part of a series of Dutch port infrastructure design recommendations that include the Quay
