Correlative Learning Zhe Chen, Simon Haykin, Jos J. Eggermont, Suzanna Becker, 2008-01-07 Correlative Learning A Basis for Brain and Adaptive Systems provides a bridge between three disciplines computational neuroscience neural networks and signal processing First the authors lay down the preliminary neuroscience background for engineers The book also presents an overview of the role of correlation in the human brain as well as in the adaptive signal processing world unifies many well established synaptic adaptations learning rules within the correlation based learning framework focusing on a particular correlative learning paradigm ALOPEX and presents case studies that illustrate how to use different computational tools and ALOPEX to help readers understand certain brain functions or fit specific engineering applications

Pulse Code Modulation Techniques Bill Waggener, William N. Waggener, 1995 Pulse Code Modulation Techniques brings together the theory and practice of PCM at the physical layer where the bits meet the silicon so to speak The key topics of symbol encoding detection and synchronization are discussed in detail both from a theoretical and a practical standpoint Topics which have been largely absent in text books such as multiplexing formatting and format synchronization are also considered Although PCM evolved as a communication technology it has become an important technology in data recording In a sense

magnetic or optical media are just specialized communication media and the key technologies discussed in this book are just as important to recording applications as to communications PCM codes used for magnetic recording applications are discussed along with traditional communication codes The design analysis and implementation of a PCM system requires knowledge of very specific techniques associated with detection synchronization and coding The techniques have evolved from both ad hoc methods and complex theory One of the goals of this book is to bridge the gap between theory and practice in the key techniques Matched filters are not only discussed theoretically but means for implementing them are also considered The same is true with symbol synchronization

Adaptive Techniques for Mixed Signal System on Chip

Ayman Fayed, Mohammed Ismail, 2006-09-27 Adaptive Techniques for Mixed Signal System on Chip discusses the concept of adaptation in the context of analog and mixed signal design along with different adaptive architectures used to control any system parameter The first part of the book gives an overview of the different elements that are normally used in adaptive designs including tunable elements as well as voltage current and time references with an emphasis on the circuit design of specific blocks such as voltage controlled transconductors offset comparators and a novel technique for accurate implementation of on chip resistors While the first part of the book addresses adaptive techniques at the circuit and block levels the second part discusses adaptive equalization architectures employed to minimize the impact of ISI Intersymbol Interference on the quality of received data in high speed wire line transceivers It presents the implementation of a 125Mbps transceiver operating over a variable length of Category 5 CAT 5 Ethernet cable as an example of adaptive equalizers

MATLAB and Its Applications in Engineering Raj Kumar Bansal, Ashok K. Goel, Manoj Kumar Sharma, 2009 The book serves to be both a textbook and a reference for the theory and laboratory courses offered to undergraduate and graduate engineering students and for practicing engineers
