The use of simulation modeling in criminal justice dates back to the 1970s Early models were developed to capture the realities of the criminal justice system to identify what changes were needed and how small changes would affect the overall picture Significant time and effort were devoted to these projects and although they achieved some success the complex nature of the criminal justice system and the difficulties associated with improving and maintaining the models prohibited wide spread adoption in the field Some of the problems with early simulation projects were the lack of data to validate models the lack of technical skills needed by staff to design and build the models and the technical difficulties with software programming to transform models into computerized representations As simulation modeling has becoming a more popular technique across many disciplines and technology as well as the technical skills of researchers has improved this book revisits the concept of simulation modeling with new applications for the criminal justice system The wider availability of data has made for more opportunity to verify and validate models computing software has become more available and easier to use and the capacity for visualization and communication of models shows promise for the future of simulation in criminal justice The time has come to examine the past present and future contributions of simulation modeling to the field of criminal justice This work provides a central resource of information for the current state of simulation modeling and overview of existing techniques and cases of success and directions for future development This work will be an important resource for researchers in criminal justice and related fields as well as those studying policy related topics **Applied Probability and**

Stochastic Processes Richard M. Feldman, Ciriaco Valdez-Flores, 2009-11-27 This book is a result of teaching stochastic processes to junior and senior undergraduates and beginning graduate students over many years In teaching such a course we have realized a need to furnish students with material that gives a mathematical presentation while at the same time providing proper foundations to allow students to build an intuitive feel for probabilistic reasoning We have tried to maintain a balance in presenting advanced but understandable material that sparks an interest and challenges students without the discouragement that often comes as a consequence of not understanding the material Our intent in this text is to develop stochastic processes in an elementary but mathematically precise style and to provide sufficient examples and homework exercises that will permit students to understand the range of application areas for stochastic processes We also practice active learning in the classroom In other words we believe that the traditional practice of lecturing continuously for 50 to 75 minutes is not a very effective method for teaching Students should somehow engage in the subject matter during the

teaching session One effective method for active learning is after at most 20 minutes of lecture to assign a small example problem for the students to work and one important tool that the instructor can utilize is the computer So times we are fortunate to lecture students in a classroom containing computers with a spreadsheet program usually Microsoft s Excel
