Proceedings ,1989 **Dynamic Stochastic Optimization** Kurt Marti,Yuri Ermoliev,Georg Ch. Pflug,2012-12-06

Uncertainties and changes are pervasive characteristics of modern systems involving interactions between humans economics nature and technology These systems are often too complex to allow for precise evaluations and as a result the lack of proper management control may create significant risks In order to develop robust strategies we need approaches which explicitly deal with uncertainties risks and changing conditions One rather general approach is to characterize explicitly or implicitly uncertainties by objective or subjective probabilities measures of confidence or belief This leads us to stochastic optimization problems which can rarely be solved by using the standard deterministic optimization and optimal control methods In the stochastic optimization the accent is on problems with a large number of decision and random variables and consequently the focus of attention is directed to efficient solution procedures rather than to analytical closed form solutions Objective and constraint functions of dynamic stochastic optimization problems have the form of multidimensional integrals of rather involved in that may have a nonsmooth and even discontinuous character the tegrands typical situation for hit or miss type of decision making problems involving irreversibility of decisions or and abrupt changes

of the system. In general, the exact evaluation of such functions as is assumed in the standard optimization and control theory is practically impossible. Also, the problem does not often possess the separability properties that allow to derive the standard in control theory recursive Bellman equations.

Decision Making and Forecasting Kneale T. Marshall, Robert M. Oliver, 1995. This book discusses how to design the most important features of realistic decision problems into analytical models that reveal their structure and give insight. Emphasis is on model formulation using graphical techniques with influence diagrams and decision trees. *Decision Making and Forecasting* shows how forecasting must be integrated with decision making in a coherent manner and makes frequent use of the economic value of forecasts.
