Materials with Complex Behaviour Lucas F. M. da Silva,Holm Altenbach,2010-08-17 Common engineering materials reach in many demanding applications such as automotive or aerospace their limits and new developments are required to fulfill increasing demands on performance and characteristics The properties of materials can be increased for example by combining different materials to achieve better properties than a single constituent or by shaping the material or constituents in a specific structure Many of these new materials reveal a much more complex behavior than traditional engineering materials due to their advanced structure or composition Furthermore the classical applications of many engineering materials are extended to new ranges of applications and to more demanding environmental conditions such as elevated temperatures All these tendencies require in addition to the synthesis of new materials proper methods for their manufacturing and extensive programs for their characterization In many fields of application the development of new methods and processes must be accomplished by accurate and reliable modeling and simulation techniques Only the interaction between these new developments with regards to manufacturing modeling characterization further processing and monitoring of materials will allow to meet all demands and to introduce these developments in safety relevant applications The 3rd International Conference on Advanced Computational Engineering and Experimenting ACE X 2009 was held in Rome Italy from 22 to 23 June 2009 with a strong focus on the above mentioned developments **Fundamentals of Modeling for Metals**
