for bids No One at the Wheel Samuel I Schwartz,2018-11-20 The country s leading transport expert describes how the driverless vehicle revolution will transform highways cities workplaces and laws not just here but across the globe Our time at the wheel is done Driving will become illegal as human drivers will be demonstrably more dangerous than cars that pilot themselves Is this an impossible future or a revolution just around the corner Sam Schwartz America s most celebrated transportation guru describes in this book the revolution in self driving cars The ramifications will be dramatic and the transition will be far from seamless It will overturn the job market for the one in seven Americans who work in the trucking industry It will cause us to grapple with new ethical dilemmas if a car will hit a person or a building endangering the lives of its passengers who will decide what it does It will further erode our privacy since the vehicle can relay our location at any moment And like every other computer controlled device it can be vulnerable to hacking Right now every major car maker here and abroad is working on bringing autonomous vehicles to consumers The fleets are getting ready to roll and nothing will ever be the same and this book shows us what the future has in store Infrastructure to 2030 (Vol.2) Mapping Policy for Electricity, Water and Transport OECD,2007-09-10 This book assesses the long term future viability of current business models in electricity water rail and urban public transport and presents policy recommendations *Handbook on Transport and Urban Planning in the Developed World* Michiel C.J. and to result in higher variability in precipitation especially in the south The most critical economic sectors vulnerable to climate change in Mozambique are agriculture transport and potentially energy In agriculture maize is likely to be the most affected key crop This can pose risks to food security alongside expected higher food inflation because of climate change given maize s widespread cultivation and role in nutrition The impact on other crops is likely to be more limited and to a large extent driven by damages from increased frequency of extreme weather events This could exacerbate challenges in the sector which is already constrained by low productivity and limited arable areas That said climate change could create some opportunities for example rice yields are projected to improve Most studies project agricultural production in the central region to be most adversely affected by climate change albeit the impact varies by crop and within regions Mozambique s transport infrastructure is highly vulnerable to climate change due to the projected increase in flooding the low proportion of paved roads their limited interconnectivity and the vulnerability of ports to cyclones and storm surges Damages to Mozambique s transport sector are likely to have knock on effects to other sectors and can have significant regional implications as the country serves as a conduit for landlocked neighboring countries Infrastructure damages alongside the projected coastal erosion may severely affect the tourism sector Furthermore Mozambique s high dependence on hydropower exposes it to losses from rainfall variability which is expected to increase The country s largest hydropower plant is located downstream on the Zambezi River which various studies project to dry up due to climate change Increased water use in upstream countries such as because of greater irrigation needs and in response to growing populations could also pose risks to Mozambique s hydropower sector
