

# Typical Inventory Audit Procedures Using Generalized Audit Software

**FIGURE 8.6**  
Illustration of the Uses  
of Generalized Audit  
Software

| Basic Inventory Audit Procedure                                                                       | How Generalized Audit Software Might Be Used                                                                                                                                                   |
|-------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. Observe the physical count, making appropriate test counts.                                        | Determine which items are to be test counted by selecting from the inventory file a sample of items that provides the desired dollar coverage.                                                 |
| 2. Test the mathematical accuracy of the inventory extensions and footings.                           | For each item in the inventory file, multiply the quantity on hand by the cost per unit and add the extended amounts.                                                                          |
| 3. Compare the auditors' test counts to the inventory records.                                        | Organize the auditors' test counts and compare them to inventory records.                                                                                                                      |
| 4. Compare the client's physical count data to the inventory records.                                 | Compare the quantity of each item counted to the quantity on hand in the inventory file.                                                                                                       |
| 5. Perform a lower-of-cost-or-market test by obtaining a list of current costs per item from vendors. | Compare the current costs per unit to the cost per unit in the inventory file; print out the extended value for each item, using the lower of the two unit costs, and add extended amounts.    |
| 6. Test purchase and sales cutoff.                                                                    | List a sample of items on the inventory file for which the date of last purchase or last sale is on, or immediately before, the date of the physical count.                                    |
| 7. Confirm the existence of items located in public warehouses.                                       | List items located in public warehouses and print confirmations.                                                                                                                               |
| 8. Analyze inventory for evidence of obsolescence or slow-moving items.                               | List items from the inventory file for which the turnover ratio (quantity sold divided by quantity on hand) is low or for which the date of last sale indicates a lack of recent transactions. |
