## **Automate This How Algorithms Came To Rule Our World Christopher Steiner:**

*Automate This* Christopher Steiner, 2012-08-30 The rousing story of the last gasp of human agency and how today's best and brightest minds are endeavoring to put an end to it. It used to be that to diagnose an illness, interpret legal documents, analyze foreign policy or write a newspaper article, you needed a human being with specific skills and maybe an advanced degree or two. These days, high-level tasks are increasingly being handled by algorithms that can do precise work not only with speed but also with nuance. These bots started with human programming and logic but now their reach extends beyond what their creators ever expected. In this fascinating, frightening book, Christopher Steiner tells the story of how algorithms took over and shows why the bot revolution is about to spill into every aspect of our lives, often silently, without our knowledge. The May 2010 Flash Crash exposed Wall Street's reliance on trading bots to the tune of a 998-point market drop and 1 trillion in vanished market value. But that was just the beginning. In *Automate This*, we meet bots that are driving cars, penning haiku and writing music mistaken for Bach's. They listen in on our customer service calls and figure out what Iran would do in the event of a nuclear standoff. There are algorithms that can pick out the most cohesive crew of astronauts for a space mission or identify the next Jeremy Lin. Some can even ingest statistics from baseball games and spit out pitch-perfect sports journalism indistinguishable from that produced by humans. The interaction of man and machine can make our lives easier. But what will the world look like when algorithms control our hospitals, our roads, our culture, and our national security? What happens to businesses when we automate judgment and eliminate human instinct? And what role will be left for doctors, lawyers, writers, truck drivers, and many others? Who knows, maybe there's a bot learning to do your job this minute. — *An*

**Future** Nick Srnicek, Alex Williams, 2015-11-17 This major new manifesto offers a clear and compelling vision of a postcapitalist society and shows how left-wing politics can be rebuilt for the 21st century. Mark Fisher, author of *Capitalist Realism*, *Neoliberalism isn't working*. Austerity is forcing millions into poverty and many more into precarious work while the left remains trapped in stagnant political practices that offer no respite. *Inventing the Future* is a bold new manifesto for life after capitalism. Against the confused understanding of our high-tech world by both the right and the left, this book claims

that the emancipatory and future oriented possibilities of our society can be reclaimed Instead of running from a complex future Nick Srnicek and Alex Williams demand a postcapitalist economy capable of advancing standards liberating humanity from work and developing technologies that expand our freedoms This new edition includes a new chapter where they respond to their various critics

**The Rise of the Robots** Martin Ford,2015-09-03 Intelligent algorithms are already well on their way to making white collar jobs obsolete travel agents data analysts and paralegals are currently in the firing line In the near future doctors taxi drivers and ironically even computer programmers are poised to be replaced by robots Without a radical reassessment of our economic and political structures we risk the very implosion of the capitalist economy itself In The Rise of the Robots technology expert Martin Ford systematically outlines the achievements of artificial intelligence and uses a wealth of economic data to illustrate the terrifying societal implications From health and education to finance and technology his warning is stark all jobs that are on some level routine are likely to eventually be automated resulting in the death of traditional careers and a hollowed out middle class The robots are coming and we have to decide now whether the future will bring prosperity or catastrophe

*Malicious Deceivers* Ioana B. Jucan, 2023-08-08 In *Malicious Deceivers* Ioana B Jucan traces a genealogy of post truth intimately tied to globalizing modernity and connects the production of repeatable fakeness with capitalism and Cartesian metaphysics Through case studies that cross times and geographies the book unpacks the notion of fakeness through the related logics of dissimulation deception and simulation performativity as seen with software AI television plastics and the internet Specifically Jucan shows how these dis simulation machines and performative objects construct impoverished pictures of the world ensuring a repeatable sameness through processes of hollowing out embodied histories and lived experience Through both its methodology and its subjects objects of study the book further seeks ways to counter the abstracting mode of thinking and the processes of voiding performed by the twinning of Cartesian metaphysics and global capitalism Enacting a model of creative scholarship rooted in the tradition of writing as performance Jucan a multimedia performance maker and theater director uses the embodied I as a framing and situating device for the book and

its sites of investigation In this way she aims to counter the Cartesian voiding of the thinking I and to enact a different kind of relationship between self and world from the one posited by Descartes and replayed in much Western philosophical and more broadly academic writing a relationship of separation that situates the I on a pedestal of abstraction that voids it of its embodied histories and fails to account for its positionality within a socio historical context and the operations of power that define it

**The Zero Marginal Cost Society** Jeremy Rifkin,2014-04-01 The New York Times bestselling author describes how current trends will create an era when anything and everything is available for almost nothing In The Zero Marginal Cost Society New York Times bestselling author Jeremy Rifkin uncovers a paradox at the heart of capitalism that has propelled it to

greatness but is now taking it to its death the inherent entrepreneurial dynamism of competitive markets that drives productivity up and marginal costs down enabling businesses to reduce the price of their goods and services in order to win over consumers and market share Marginal cost is the cost of producing additional units of a good or service if fixed costs are not counted While economists have always welcomed a reduction in marginal cost they never anticipated the possibility of a technological revolution that might bring marginal costs to near zero making goods and services priceless nearly free and abundant and no longer subject to market forces Now a formidable new technology infrastructure the Internet of things IoT is emerging with the potential of pushing large segments of economic life to near zero marginal cost in the years ahead Rifkin describes how the Communication Internet is converging with an Energy Internet and Logistics Internet to create a new technology platform that connects all There are billions of sensors feeding Big Data into an IoT global neural network Prosumers can connect to the network and use Big Data analytics and algorithms to accelerate efficiency dramatically increase productivity and lower the marginal cost of producing and sharing a wide range of products and services to near zero just like they now do with information goods The plummeting of marginal costs is spawning a hybrid economy part capitalist market and part Collaborative Commons with far reaching implications for society according to Rifkin Hundreds of millions of people are already transferring parts of their economic lives to the global Collaborative Commons Prosumers are plugging into the IoT and making and sharing their own information entertainment green energy and 3D printed products at near zero marginal cost Students are enrolling in free massive open online courses MOOCs that operate at near zero marginal cost Social entrepreneurs are even bypassing the banking establishment and using crowdfunding to finance startup businesses as well as creating alternative currencies in the fledgling sharing economy In this new world social capital is as important as financial capital access trumps ownership sustainability supersedes consumerism cooperation ousts competition and exchange value in the capitalist marketplace is increasingly replaced by sharable value on the Collaborative Commons Rifkin concludes that capitalism will remain with us albeit in an increasingly streamlined role primarily as an aggregator of network services and solutions allowing it to flourish as a powerful niche player in the coming era We are however says Rifkin entering a world beyond markets where we are learning how to live together in an increasingly interdependent global Collaborative Commons

**The Software Society** William Meisel, 2013-01-31 Software is driving most technology today from PCs to mobile phones to thermostats Software can evolve quickly and that factor is driving an accelerating pace of change in technology Software is also becoming more tightly connected to humans through advances in dealing with speech and human language as well as being always available through mobile devices As our connection to technology tightens it drives rapid cultural evolution in effect changing what it means to be human Technological change driven by software also impacts our economy in basic ways as computer technology drives more aspects of production marketing services and sales Software advances allow technology to do more tasks formerly requiring humans creating efficiencies productivity

enhancements that can grow the economy On the other hand the rapid changes are affecting the economy at a pace that is overcoming human abilities to adapt to the job opportunities available and companies ability to adapt to rapid market changes We are seeing today the impact of that fundamental economic change in persistent unemployment and in stress on some major companies that have historically been solid performers The Software Society digs into these fundamental trends of softwares impact on our culture and our economy It explains the trend to use computer intelligence to enhance our human intelligence and discusses its potential and limitations The book digs into the economic risk caused by automation moving faster than peoples ability to adapt to the change and suggests solutions to address this danger

**The Marketplace of Attention** James G. Webster, 2016-09-02 How do media find an audience when there is an endless supply of content but a limited supply of public attention Feature films television shows homemade videos tweets blogs and breaking news digital media offer an always accessible apparently inexhaustible supply of entertainment and information Although choices seems endless public attention is not How do digital media find the audiences they need in an era of infinite choice In The Marketplace of Attention James Webster explains how audiences take shape in the digital age Webster describes the factors that create audiences including the preferences and habits of media users the role of social networks the resources and strategies of media providers and the growing impact of media measures from ratings to user recommendations He incorporates these factors into one comprehensive framework the marketplace of attention In doing so he shows that the marketplace works in ways that belie our greatest hopes and fears about digital media Some observers claim that digital media empower a new participatory culture others fear that digital media encourage users to retreat to isolated enclaves Webster shows that public attention is at once diverse and concentrated that users move across a variety of outlets producing high levels of audience overlap So although audiences are fragmented in ways that would astonish midcentury broadcasting executives Webster argues that this doesn't signal polarization He questions whether our preferences are immune from media influence and he describes how our encounters with media might change our tastes In the digital era's marketplace of attention Webster claims we typically encounter ideas that cut across our predispositions In the process we will remake the marketplace of ideas and reshape the twenty first century public sphere
