Multivariable System Identification For Process Control Y. Zhu, 2001-10-08

Systems and control theory has experienced significant development in the past few decades

New techniques have emerged which hold enormous potential for industrial applications and which have therefore also attracted much interest from academic researchers

However the impact of these developments on the process industries has been limited

The purpose of Multivariable System Identification for Process Control is to bridge the gap between theory and application and to provide industrial solutions based on sound scientific theory to process identification problems

The book is organized in a reader friendly way starting with the simplest methods and then gradually introducing more complex techniques

Thus the reader is

offered clear physical insight without recourse to large amounts of mathematics Each method is covered in a single chapter or section and experimental design is explained before any identification algorithms are discussed The many simulation examples and industrial case studies demonstrate the power and efficiency of process identification helping to make the theory more applicable Matlab™ M files designed to help the reader to learn identification in a computing environment are included
