will push your Node.js programming skills to the next level. If you are a web developer with experience in writing client-side JavaScript and want to discover the fascinating world of Node.js to develop fast and efficient web and desktop applications, then this book is for you. *Node.js for Embedded Systems* Patrick Mulder, Kelsey Breseman, 2016-10-10. How can we build bridges from the digital world of the Internet to the analog world that surrounds us? By bringing accessibility to embedded components such as sensors and microcontrollers, JavaScript and Node.js might shape the world of physical computing as they did for web browsers. This practical guide shows hardware and software engineers, makers, and web developers how to talk in JavaScript with a variety of hardware platforms. Authors Patrick Mulder and Kelsey Breseman also delve into the basics of microcontrollers, single-board computers, and other hardware components. Use JavaScript to program microcontrollers with Arduino and Espruino. Prototype IoT devices with the Tessel 2 development platform. Learn about electronic input and output components including sensors. Connect microcontrollers to the Internet with the Particle Photon toolchain. Run Node.js on single-board computers such as Raspberry Pi and Intel Edison. Talk to embedded devices with Node.js libraries such as Johnny-Five and remotely control the devices with Bluetooth. Use MQTT as a message broker to connect devices across networks. Explore ways to use robots as building blocks for shared experiences. [Backbone.js Blueprints](#) Andrew Burgess, 2014-05-18. This book is an easy-to-follow guide which is full of examples that will take you through building seven very different web applications with Backbone. The code is broken down into manageable bites and then thoroughly explained. If you are ready to learn about building frontend applications in Backbone, this is the book for you. Perhaps you've dipped your toe into Backbone and are ready to take the plunge. Even if you haven't, this book will teach you everything you need to know to build solid frontend apps with Backbone. You'll need to be pretty good at JavaScript and have a working knowledge of HTML and CSS, but other than that, you're good to go. *Modern Full-Stack Development* Frank Zammetti, 2020-03-29. Explore what React, Node, TypeScript, Webpack, and Docker have to offer individually and how they all fit together in modern app development. React is one of the most popular web development tools available today, and Node.js is extremely popular for server-side development. The fact that both utilize JavaScript is a big selling point, but as developers use the language more, they begin to recognize the shortcomings, and that's where TypeScript comes in, and why it's gaining in popularity quickly. Add Webpack and Docker to the mix, and you've got a potent full development stack on which to build applications. You'll begin by building a solid foundation of knowledge and quickly expand it by constructing two different real-world apps. These aren't just simple contrived examples, but real apps that you can choose to install on your servers and use for real. By the end, you will have a solid grasp of building apps with React, Node.js, and TypeScript, and a good grasp on how Webpack can be used to optimize and organize your code for deployment. You'll also understand how Docker can be used to run the apps you build in a clear and well-defined way, all of which will be able to springboard you into creating more advanced apps on your own. What You'll Learn: Get a project started and logically structure it. Construct a user interface with

React and Material UI Use WebSockets for real time communication between client and server Build a REST API with Node and Express as another approach to client server communication Package the app with Webpack for optimized delivery Take a completed app and wrap it up with Docker for easy distribution Review a host of other ancillary topics including NPM Semantic versioning Babel NoSQL and more Who This Book Is For Webdevelopers with basic knowledge of HTML JavaScript CSS and CLI tools who are interested in and in all aspects of application development and using TypeScript instead of straight JavaScript
