Paradigmatic Shifts in Geographical Thought

Lalita Rana,2020-01-01 In advancing disciplines like Geography the methodological debate is a sign of health In Geography there has been extreme diversity of viewpoints on both philosophy and methodology with constant extension and also a shift in focus The methodology of geography came under debate for the first time during the middle of twentieth century when the paper published by F K Schaefer an American scholar brought both the qualitative and quantitative revolution in geographic development Shortly after this publication were discussed the paradigmatic shifts in a discipline by Thomas S Kuhn another American scholar through his seminal work in which he painted a picture of the development of science quite unlike that had gone before In order to elucidate this process of development of science Kuhn prepared a model termed as the Paradigm of Science Distinct parallels may be sought between the historical evolution of scientific discipline as explained by Thomas Kuhn and the historical evolution of the discipline of geography Seeking inspiration from the works of both of the great scholars mentioned above the present book examines the evolution of geographical thought from the perspective of Thomas Kuhn Two publications of mine 2008 2014 are on this line only However the methodological literature to understand the philosophical background making possible this disciplinary growth is too small The purpose here is to explore and screen the growth and development of Geography under sequential methodological changes over time in the light of various paradigmatic shifts with the acknowledgement of crises and revolutionary phases of development in the discipline

Accordingly the work identifies eight paradigmatic shifts intercepted by eight phases of crises in the discipline **Learning**

Pauline Couper, 2015 **Geographical thought** Lalita Rana, 2008 **Spaces of Geographical Thought** Paul Cloke, Ron Johnston, 2005-01-26 Spaces of Geographical Thought examines key ideas like space and place which inform the geographic imagination The text discusses the core conceptual vocabulary of human geography agency structure state society culture economy space place black white man woman nature culture local global and time space explains the significance of these binaries in the constitution of geographic thought and shows how many of these binaries have been interrogated and reimagined in more recent geographical thinking A consideration of these binaries will define the concepts and situate students in the most current geographical arguments and debates The text will be required reading for all modules on the philosophy of geography and on geographical theory **Geographical Thought** Lalita Rana, 2014-01-01 Geographical thought at any point in time is a manifestation of the prevailing viewpoints and methodological approaches in vogue The development of geography has a history of evolution of over 2000 years The discipline has been crafted over time to incorporate ideas from various schools of thought and several other disciplines from ancient to modern times The existing methodology and the subject matter of Geography is a reflection of this assemblage and evolution The nature of development remained more philosophical up to modern period The First edition of this book published in 2008 was an attempt towards compilation of relevant study material on evolution of Geographic thought in a systematic way up to the modern period The book has been revised with the addition of two elaborated sections i e one each on the Classical and the Contemporary tradition in geography However the major thrust of present book is on the nature of geographic developments in its contemporary phase More recently the anthropocentrism and a concern about methodology are more evident in the development of discipline **MODERN GEOGRAPHICAL THOUGHT.
