Local Polynomial Modelling And Its Applications:

Local Polynomial Modelling and Its Applications Jianqing Fan, Irene Gijbels, 2018-05-02 Data analytic approaches to regression problems arising from many scientific disciplines are described in this book. The aim of these nonparametric methods is to relax assumptions on the form of a regression function and to let data search for a suitable function that describes the data well. The use of these nonparametric functions with parametric techniques can yield very powerful data analysis tools. Local polynomial modeling and its applications provides an up to date picture on state of the art nonparametric regression techniques. The emphasis of the book is on methodologies rather than on theory with a particular focus on applications of nonparametric techniques to various statistical problems. High dimensional data analytic tools are presented and the book includes a variety of examples. This will be a valuable reference for research and applied statisticians and will serve as a textbook for graduate students and others interested in nonparametric regression. *Local Polynomial Modelling*

and its Applications Jianqing Fan, I. Gijbels, 2013-08-21 This book is on data analytic approaches to regression problems arising from many scientific disciplines. These approaches are also called nonparametric regression in the literature. The aim of non parametric methods is to relax assumptions on the form of a regression function and to let data search for a suitable function that describes well the available data. These approaches are powerful in exploring fine structural relationships and provide very useful diagnostic tools for parametric models. Over the last two decades vast efforts have been devoted to nonparametric regression analyses. This book hopes to bring an up to date picture on the state of the art of nonparametric regression techniques. The emphasis of this book is on methodologies rather than on theory with a particular focus on applications of nonparametric techniques to various statistical problems. These problems include least squares regression, quantile and robust regression, survival analysis, generalized linear models and nonlinear time series. Local polynomial modelling is employed in a large fraction of the book but other key ideas of nonparametric regression are also discussed.
